Executive Summary

This report documents the findings of the United States Postal Service's Household Diary Study (HDS) for Fiscal Year (FY) 2006. The three main study purposes are to:

- Measure the mail sent and received by U.S. households,
- Provide a means to track household mail trends over time, and
- Make comparisons of mail use between different types of households.

The report examines these trends in the context of changes and developments in the wider markets for communications and package delivery.

Background

The Household Diary Study survey, fielded continuously since 1987, aims to collect information on household use of the mail and how that use changes over time. The survey collects household information on demographics, lifestyle, attitudes toward mail and advertising, bill payment behavior, and use of the Internet and other information technologies.

The FY 2006 report covers Government Fiscal Year 2006, with comparisons to 2004 and 2005.

The aim of the HDS is to collect information on household use of the mail and how that use changes over time.

Overview

Households received 155.5 billion pieces of mail in 2006, and sent 19.4 billion, as seen in Table E.1. Mail sent or received by households constituted 79 percent of total domestic mail in FY 2006. Fifty-six percent of the mail that households received was sent Standard Mail. Only four percent of household mail (and about three percent of total mail) was sent between households; the rest was sent between households and nonhouseholds.

Table E.1:
Mail Sent and Received by Households
(Billions of Pieces)

Mail Classification	Received	Sent
First-Class:	59.3	18.7
Standard Regular Mail	73.1	—
Standard Nonprofit Mail	13.7	—
Periodicals	6.7	—
Packages	2.2	.5
Expedited	.5	.2
Total	**155.5**	**19.4**
Household-to-Household	6.3	
Total Mail Sent and Received by Households	168.6	
FY 2006 RPW Total	212.3	
Nonhousehold-to-Nonhousehold (Residual)	43.8	
Unaddressed	17.8	—

Source: Household Diary Study, FY 2006.
Note: Expedited includes Priority Mail and Express Mail.

Mail Markets

The Household Diary Study examines mail by the markets it serves. This design cuts across classes, but provides a foundation for understanding mail flows and the marketplace changes that affect them. Table E.2 shows the volume of household mail by market for 2004 through 2006.

Table E.2:
Household Mail Volume Sent and Received by Market Served
(Billions of Pieces)

Market	2004	2005	2006
Correspondence	17.2	16.6	15.1
Transactions	42.5	42.7	41.6
Advertising	94.8	101.6	104.7
Periodicals	6.7	6.7	6.7
Packages	2.6	2.4	3.3
Unclassified	4.5	4.5	5.5
Total	**160.8**	**167.0**	**168.6**

Source: Household Diary Study, FY 2004, 2005 and 2006.
Note: Correspondence and Transactions include 8.3 billion pieces of First-Class advertising-enclosed mail (excluded from totals). Advertising excludes unsolicited samples of periodicals and packages (0.2 billion pieces). Package Volumes include ground packages and expedited.

Thirty-four percent of household mail contains correspondence and transactions, down from about 37 percent in 2004. In part, the decline in the percentage of correspondence is a continuation of long-term trends, but it is also related to changing demographics. Younger households both send and receive fewer pieces of correspondence mail, a result of younger households' comfort with and use of the Internet, and their lower average income level.

The increase in e-mail correspondence and the movement towards electronic bill payment have affected mail volumes.

Electronic alternatives also affect transactions mail volume. Automatic deduction and Internet bill payment account for a growing share of household bill payments over time. In fact, over the past five years, the percentage of bills paid by electronic methods increased from 15 percent in 2002 to 29 percent in 2006. In contrast, bills paid by mail decreased from 75 percent to 62 percent of total payments during the same time. Similarly, in-person payments are also on the decline, with 6 percent of all bills paid in person in 2006, down from 8 percent in 2002. The number of bills and statements households received through the mail decreased on a per household basis, while the number of bills received over the Internet continues to grow rapidly.

Advertising mail represented more than half of all mail received by households in 2006. As shown in Table E.3, 83 percent of all advertising mail received by households is Standard Mail (86.8 billion pieces). The remainder consists of First-Class Mail; either stand-alone advertising (9.7 billion pieces), or advertising along with other matter (8.3 billion pieces). Over time, the data show a decline in the percentage of First-Class advertising mail.

Table E.3:
Advertising by Mail Class

Mail Classification	Volume *(Billions)*	Percent of Total Advertising
First-Class Advertising	17.9	17%
Standard Regular Mail	73.1	70%
Standard Nonprofit Mail	13.7	13%
Total Advertising Mail	**105.0**	**100%**

Source: Household Diary Study, FY 2006. Total includes unsolicited samples of packages and periodicals.

Households received 6.7 billion pieces of Periodicals mail in 2006, consistent with 2005 and 2004 levels. Nearly three-quarters (72 percent) of these pieces were magazines.

In 2006, households received 2.7 billion packages and sent 673 million packages. Packages sent increased 32 percent over 2005. Delivery from mail-order and Internet retailers is an important driver of package volume, and while the HDS data is not designed to quantify it, there are indications that online auction sites (like eBay) are responsible for some of the increase in packages sent by households seen over the past several years.

Table E.4:
Packages Sent and Received via the U.S. Postal Service
(Millions of Pieces)

Mail Classification	2006			
	Sent		Received	
	Number	Percent	Number	Percent
First-Class	352	52%	868	33%
Expedited	182	27%	504	19%
Standard Mail	—	—	672	25%
Package Services	121	18%	512	19%
Unclassified	17	4%	97	4%
Total Packages	**673**	**100%**	**2,654**	**100%**

Note: Totals may not sum due to rounding. Expedited includes Priority Mail and Express Mail.

Chapter 1: Introduction – Volumes & Trends

The U.S. Postal Service Household Diary Study (HDS) Report documents the findings of the Fiscal Year (FY) 2006 study. The HDS measures the mail sent and received by U.S. households, tracks household mail trends and compares mail use between different types of households.

The Household Diary Study provides a means to track household mail trends over time.

The Survey

The Household Diary Study survey, fielded continuously since 1987, aims to collect information on household use of the mail and how that use changes over time. The survey collects household information on:

- Demographics,
- Lifestyle,
- Attitudes toward mail and advertising,
- Bill payment behavior, and
- Use of the Internet and other information technologies.

These data are used for market research, forecasting, and strategic planning within the Postal Service.

The Survey Consists of Three Parts:

1) An **entry interview**, conducted by phone, collects demographic, lifestyle, and attitudinal information from about 8,500 households.
2) These households then receive a **mail diary**, which collects information on the mail the household sends and receives in a one-week period. Annually, about 5,200 households, or 100 each week, successfully complete the diary.

The data generated by these two instruments are the basis of the analysis in this report.

The HDS FY 2006 report covers the period from October 1, 2005, through September 30, 2006, equivalent to the Government Fiscal Year (GFY) used by the Postal Service. Data from FY 2004 and FY 2005 are also reported on a GFY basis. Data from earlier years are presented on a Postal Fiscal Year basis, consisting of 52-week periods that shifted slightly in relation to calendar dates.

U.S. Postal Service Volumes

Serving a nation containing five percent of the world's population, the Postal Service delivers almost 46 percent of the world's mail. The Postal Service delivered 213 billion pieces of mail in FY 2006 – an increase of 1 billion pieces from 2005. Standard Mail volume exceeded First-Class Mail for the first time in 2005 – a trend repeated in 2006. The 1.3 billion decrease in First-Class Single-Piece letters was again a major contributor to the change in mix. In fact, since 1998, First-Class Single-Piece letters have decreased by 12.2 billion, or 22 percent, fueled, in part, by the gradual adoption of the Internet and the general increase in electronic diversion of the mail.

The Postal Service estimates the revenues, volumes, and weight of mail pieces going through the postal network using a combination of statistical sampling systems, mailing statements, and accounting data. These data are published in the Revenue, Pieces, and Weight (RPW) Reports. Table 1.1 presents the volumes from the report for FY 2006, along with data for FY 1987, 2004, and 2005. This report makes frequent comparisons to those years.

Table 1.2 reports revenue, pieces, and weight data by class and shape for FY 2006.

- **The letters** column heading includes postcards and refers to pieces that are less than 11.5 inches wide by 6.125 inches tall, and less than .25 inches thick.
- **Flats** consist of pieces that are greater than 11.5 inches wide, 6.125 inches tall, or .25 inches thick, but less than 12 by 15 by .75 inches.
- **Parcels** are pieces that are larger than 12 by 15 inches, or thicker than .75 inches.

Because of the difficulty involved in recording mail piece characteristics in the Household Diary, these categories do not correspond precisely to the shape categories used by HDS respondents.

Table 1.3 is derived from Table 1.2. It shows the revenue per piece and weight per piece for each subclass of mail by shape.

Table 1.1:

Mail Flows

Mail volume can be broken into four basic flows, based on where it originates and destinates. These flows are:

- Household to household,
- Household to nonhousehold,
- Nonhousehold to household, and
- Nonhousehold to nonhousehold.

Table 1.4a shows the total mail in each flow, and Table 1.4b shows pieces per household per week.

Table 1.4a: Total Mail Flows
(Billions of Pieces)

Originating In:	Destinating In:		
	Household	Nonhousehold	Total Originating
Household	6.3	13.1	19.4
Nonhousehold	149.2	43.8	192.9

Household Mail

As shown in Table 1.4a, mail to and from households constituted almost 80 percent of total mail volume in 2006. This equates to over 28.3 pieces per week sent and received by U.S. households. Table 1.5 presents the volumes of mail sent and received by households as estimated from the Household Diary Study. The table shows the categories in which the households record their mail. Households received 155.5 billion pieces of mail and sent 19.4 billion. Both of these totals include the 6.3 billion pieces of mail that households sent to each other. The total mail received or sent by households in FY 2006 was 168.6 billion pieces.

In FY 2006, households received 17.8 billion pieces of unaddressed mail. These pieces were predominately the flyers and inserts associated with Standard Mail pieces.

Table 1.5: Mail Sent and Received by Households
(Billions of Pieces)

Mail Classification	Received	Sent

Classes and Markets

- **First-Class Mail** is used to send transactional mail, correspondence and advertising. Because it is limited to pieces weighing thirteen ounces or less, it is primarily composed of letters and cards.
- **Standard Mail** is advertising mail. For the most part, Standard Mail is composed of letters and flats, although it contains a few postcards and packages as well.
- **Periodicals** are magazines and newspapers, and are predominantly flat shaped.
- **Priority Mail** and **Express Mail** are expedited services for delivering correspondence, transactional mail, and merchandise. Priority and Express pieces can be of any shape except postcards.
- **Package Services** is used to deliver merchandise, books, catalogs, and media such as CDs and DVDs. Most of this mail is parcel shaped, but there are a few flats as well.

Table 1.7 crosswalks between classes of mail and the markets they serve.

Table 1.7:
Mail Sent and Received by Households

Class	Market *(Billions of Pieces)*					
	Correspondence	Transactions	Advertising	Periodicals	Packages	Total
First Class	15.1	41.6	17.9	—	.9	67.3
Standard Mail	—	—	86.8	—	.7	87.5
Periodicals	—	—	—	6.7	—	6.7
Priority	—	—	—	—	.5	.5
Express	—	—	—	—	.5	.5
Package Services	—	—	—	—	.6	.6
Total	**15.1**	**41.6**	**104.7**	**6.7**	**3.3**	**163.1**

Source: Household Diary Study, FY 2006.
Note: Correspondence and Transactions include 8.3 billion pieces of secondary advertising mail also reported in Advertising Mail.
The " Total" column does not include pieces that could not be identified according to markets.
Package Volumes include ground packages and expedited.
Excludes Unclassified Mail (see Table E-2).

Report Organization

The rest of the Household Diary Study report is organized around the markets the mail serves. Each chapter contains an analysis of the trends in the Household Diary Study data, as well as a discussion of how those trends impact and are impacted by changes in the broader market. The following provides an overview of each chapter.

Chapter 2: Profile of Mail Usage gives an analysis of household demographics. This chapter examines demographic trends over time and their impact on the mail, and discusses attributing factors, such as access to technology and changing attitudes.

Chapter 3: Correspondence examines mail that is used solely or primarily to deliver (non-sales-related) communications, such as letters and greeting cards. This chapter includes analysis of both personal and business correspondence.

Chapter 4: Transactions reviews financial transactions in the mail, and the impact that new technologies are having on that market. It analyzes household bill payment trends with a focus on technological and demographic change.

Chapter 5: Advertising Mail presents the trends in mail used to deliver sales-related messages. It contains information on household attitudes towards advertising by various media, treatment of advertising mail, and demographic determinants of advertising mail receipt.

Chapter 6: Periodicals examines magazines and newspapers delivered in the mail. It looks at how changing demographics are affecting the market for periodicals, and what the implications are for future volume.

Chapter 7: Packages analyzes household use of various types of parcels and express packages. It discusses the household market for merchandise delivery and looks at the market shares of the various parcel delivery companies.

In addition, there are three appendices to the report:

Appendix A contains a set of comparative tables for FY 1987, 2004, and 2005, organized by class of mail. A concordance is presented for comparison with pre-2000 reports.

Appendix B documents the study methodology and discusses how the data were collected, weighted and adjusted, and compares demographic data in the sample to that of the population as a whole.

Appendix C contains the instruments used to administer the survey.

Chapter 2: Profile of Mail Usage

Introduction

This chapter provides information on demographic trends and other factors affecting mail volume, providing a basis for assessing mail volume growth. The breakouts developed in this chapter provide the basis for much of the analyses in subsequent chapters.

The first section looks at growth in mail volume, population, households, and delivery points over recent decades. The next section examines the demographic characteristics of mail users, contrasting higher mail volume households with lower volume households. The third section details the emerging demographic trends that will affect the future of mail. The last section examines some of the technological, behavioral, and attitudinal factors affecting mail.

Mail Volume and Demographics

Total U.S. mail volume grew from 110 billion pieces in GFY 1981 to 213 billion in 2006, an increase of 94 percent. This growth has outpaced the rate of population growth and household formation. Over the same period, adult population grew 41 percent and households grew by 36 percent. The number of places to which the Postal Service delivers increased still faster, growing by 49 percent.

As Table 2.1 shows, however, volume growth has slowed dramatically over the last five years, while growth in population and households was much steadier.

Total U.S. mail volume grew from 110 billion pieces in GFY 1981 to 213 billion in 2006, an increase of 94 percent, outpacing population growth and household formation.

The 1980s was a time of extraordinary mail volume growth that started in 1978 and continued through 1988. In 1984, mail volume grew more than ten percent. During this period, technology facilitated this growth. Construction of computerized databases and techniques for sorting large amounts of data created a fertile climate for direct mail marketing. Computerization of financial systems encouraged billing by mail and payments through the mail. These innovations in business processes were further encouraged by postal rates. The Postal Service introduced worksharing discounts, encouraging mailers to prepare the mail in ways that reduced the total system cost of creating and delivering the mail. Mailers could take advantage of these discounts by sorting the mail in advance. The Postal Service would receive the mail presorted to the individual ZIP codes and/or to the carrier routes associated with those ZIP codes.

In the late 1980s and early 1990s, mail volume growth barely kept pace with household growth. The demand for mail was hurt by a recession and two very large rate increases. This was also a period in which the Postal Service absorbed substantial costs that were reapportioned from the Federal government's retirement programs.

Table 2.1:
Mail Volume and Demographics
Average Annual Growth 1981-2006

	1981-1990	1991-2000	2001-2006
Total Mail Volume	4.6%	2.3%	.5%
Delivery Points	1.7%	1.5%	1.2%
Adult Population	1.5%	1.3%	1.2%
Households	1.4%	.9%	1.1%

Source: U.S. Postal Service, U.S. Census Bureau.

The last half of the 1990s saw rapid growth in mail volume, spurred by a strong economy and rates that increased by less than inflation. The Postal Service also realigned the incentives built into its price structure. It reduced the incentives mailers had for presorting mail and encouraged them to prebarcode it. By 2002, the majority of letters the Postal Service received had qualifying barcodes on them. This restructuring of the rates took advantage of the extensive automation of mail preparation and sorting that occurred over the previous decade.

The 1990s ended in a speculative bubble as the U.S. economy rapidly embraced information technology and integrated the Internet into its business processes. An economic recession followed that began in March 2001. The 2001 Government Fiscal Year ended with the terrorist attacks on the World Trade Center and the Pentagon. This led to large-scale disruptions of those mail services dependent on air transport such as First-Class, Priority, and

Express Mail. When air service was restored, Priority Mail was no longer allowed on commercial passenger flights. GFY 2002 began with bio-terrorism. Lethal anthrax sent through the mail resulted in five deaths and a number of serious injuries. The 2.2 percent mail volume decline in 2002 was the worst since World War II. In 2003, Standard Mail volume recovered to a new high but total First-Class volume continued to decline. Workshared First-Class Mail fell for the first time ever. Since 2003, Standard Mail volume grew along with the economy, reaching new highs and exceeding First-Class Mail for the first time in 2005. Total First-Class volume, on the other hand, has continued to decline in part due to the diversion of bills and statements to electronic alternatives and to lower cost Standard Mail options.

For the period 2001-2006, total mail volume grew a modest 2.7 percent while First-Class volume fell 5.8 percent. Nevertheless, the population grew approximately 5 percent and households grew 5.7 percent during the same period. The Postal Service added 6.2 percent more delivery points to its network.

Continued growth in delivery points will be an ongoing source of pressure on Postal costs.

The Postal Service depends on mail volume growth to fund universal service. The number of addresses the delivery network serves increases as the number of American businesses and households grow. When mail volume grows faster than the number of delivery points, the system benefits from significant economies of scale. When mail volume grows slower, the Postal Service's ability to fund delivery service is hampered because the Postal Service charges its customers for piece volume but does not assess connect charges, access fees, or system fees, like many other network enterprises.

Over the next five years, both the total U.S. population and the adult population are projected to grow just under one percent a year. This is in line with the recent past. Households are expected to grow slightly faster: about 1.1 percent a year. This should result in continued growth in the number of addresses the Postal Service serves, and in the resulting costs. Given recent mail volume trends, this presents a challenge. Continued growth in delivery points that exceeds volume growth could be an ongoing source of pressure on postal costs.

Characteristics of Higher- and Lower-Volume Households

Tables 2.2 and 2.3 show the demographic characteristics of households by the amount of mail received. It is apparent from these tables that household mail use is strongly correlated with both income and education. Note, however, the similar correlation between mail receipt and Internet access, which is also related to income and education. Therefore, households that make the most use of the mail are the households with the greatest opportunity to use alternatives to the mail.

These high-volume households are beginning to take advantage of the opportunity to move away from the mail. Households that receive 30 or more pieces of mail each week pay 16.5 percent of their bills electronically, up from 12.4 percent in 2004. In comparison, households that receive less than 30 pieces of mail each week paid 13.9 percent of their bills electronically, up from 7.9 percent in 2004.

Table 2.2:
Characteristics of Higher- and Lower-Mail-Volume Households

Mail Received *(Pieces per HH per week)*	Households *(Millions)*	Median Annual HH Income	HHs w/ Internet Access *(Percent)*	Annual Bills Paid *(Millions)*	Annual Bills Paid Electronically *(Millions)*	Mail Sent *(Pieces per HH per week)*

Note: Percentages may not total 100% due to heads of households who did not answer the educational attainment question. Mail received includes USPS and Non-USPS mail. Percentages in this table are row percentages.

Demographic Characteristics of U.S. Households

This section develops breakouts of households by demographic categories that influence the volume of mail sent and received. It looks at both traditional and newly emerging factors. The following chapters will show how mail volume varies with these household characteristics.

Income, Education, and Age

Traditionally, mail use was largely determined by household income, education and age. As Table 2.4 shows, income and education are strongly correlated with each other, as expected.

The relationship between income and age, shown in Table 2.5, is somewhat more complicated. Up to retirement, household income and age are fairly closely related. After retirement, households earn substantially less, although by that point mail behavior is pretty well set, and older households continue to receive similar amounts of advertising and periodicals, and pay similar amounts of bills, even though their income declines.

Table 2.4:
Households by Income and Education
(Millions of Households)

Household Income *(Thousands)*	Educational Attainment of Head of Household					Total
	Less than High School	High School Graduate	Some College or Technical School	College Graduate	Don't Know/ Refused	
Under $35	9.3	11.2	8.0	3.2	.2	31.8
$35 to $65	4.9	11.5	9.0	7.0	.1	32.4

Under $35	8.4	8.7	14.7	0	31.8
$35 to $65	7.5	13.3	11.5	.1	32.4
$65 to $100	5.7	13.0	6.9	0	25.6
Over $100	2.7	8.2	4.0	.1	14.8
Don't know / Refused	1.4	3.4	4.3	.04	9.5
Total	**25.7**	**46.6**	**41.3**	**.6**	**114.2**

Source: Household Diary Study, FY 2006.
Note: Totals may not sum due to rounding.

Household Size

The majority of U.S. households include either one or two adults, but households with three or more adults make up 17 percent of the total. Nuclear families - consisting of two adults and at least one child - were once considered the norm but now account for only about 20 percent of households. The changing composition of households has impacted the amount and kinds of mail sent and received by households over the past 20 years, generating more and different kinds of advertising mail, as well as affecting transaction mail trends (bills tend to be tied to households as much as to individuals).

Table 2.6:
Households by Size
(Millions of Households)

Type of Internet Access	
Broadband	45.7
Dial-up	37.4
None	31.1
Total	**114.2**

Source: Household Diary Study, FY 2006.
Note: Totals may not sum due to rounding.

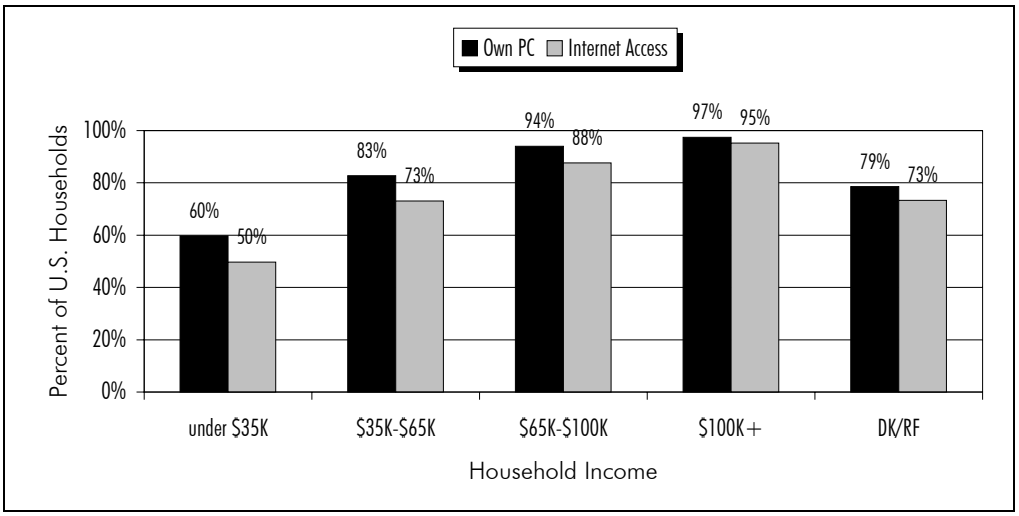

Internet Access

Access to and use of new technologies such as personal computers and the Internet have a large and growing impact on mail use. Although a significant number of pieces both sent and received by households are still related to bills and statements, electronic activity in this area is diverting mail once used for these purposes. On the other hand, on-line shopping potentially adds packages and catalog delivery to the Postal Service mailstream.

Table 2.8 shows that 73 percent of households have Internet access. The highest levels of access are within households with incomes over $100,000 in which 95 percent have Internet access, as seen in Figure 2.1. Fifty percent of households with incomes under $35,000 have Internet access. For households without Internet access, 66 percent indicated they planned to purchase the service within the next year.

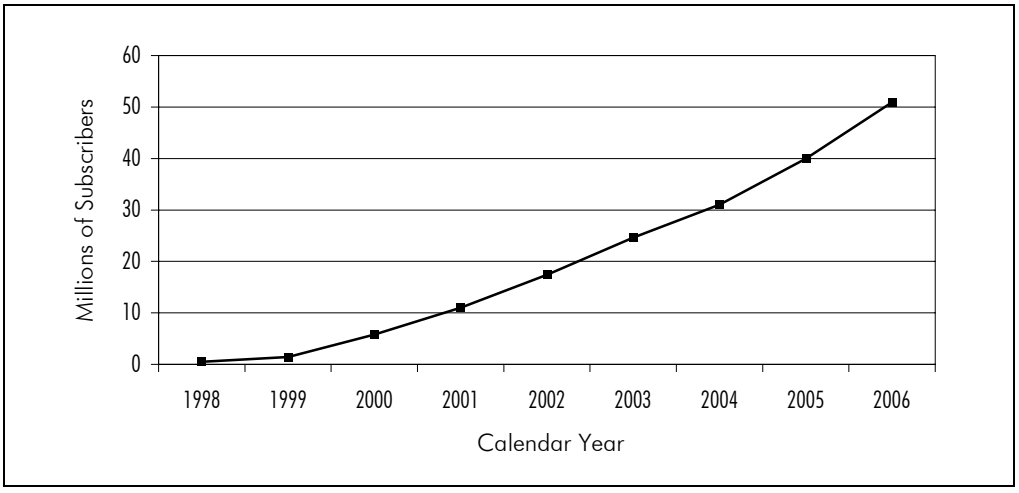

Fifty-five percent of wired households, or 40 percent of the total, have broadband access (DSL, cable, or T1). Figure 2.2 shows the trend in broadband connections. The rapid growth of broadband expands the potential scope of electronic diversion of the mail. A fast, always-on connection to the Internet becomes a stronger alternative channel for the delivery of entertainment, information, and communication. As more households begin using broadband, we expect to see effects not only on bill payments, but also bill and statement presentment, periodicals, and perhaps even advertising mail.

Use of the Post Office

A rented mailbox is one alternative that households use to manage their mail. Households that rent mailboxes overwhelmingly use the Postal Service for this service, with less than one percent of all households in the U.S. renting a box from a private company. As seen in Figure 2.3, in most cases, higher income households are slightly more likely to use a post office box than lower income households, a pattern similar to prior years. Overall, post office box use, however, declined over the past five years, after 2001, largely as a result of price increases, with less than 5.6 percent of U.S. households renting a box from the Postal Service in 2006, compared to ten percent in 2001.

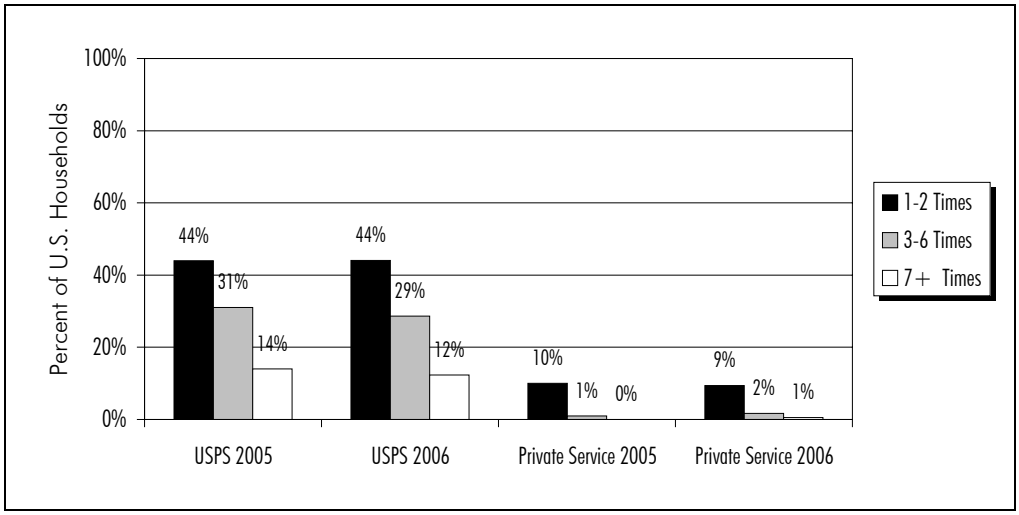

The Postal Service currently owns and operates almost 37 thousand post office locations throughout the United States. As shown in Figure 2.4, the use of post offices for mailing services continues to dominate the mail service industry. Over 85 percent of all U.S. households patronize a post office at least once a month, while just twelve percent visit a private mailing company. Over 41 percent of all households in the U.S. visit the post office three or more times in a month. Even with the continued availability of mail-related products and services through alternative modes (such as Internet orders), in-person visits to postal facilities remain stable. Only a little more than 10% of households visited private mailing companies in both 2005 and 2006.

Chapter 3: Correspondence

Introduction

This chapter examines correspondence mail among households and between households and businesses including letters, greeting cards, invitations, and announcements. In several cases, this chapter and several following it examine comparisons in data between 2004 and 2006, providing a better illustration of mail trends over time

Correspondence Mail Volume

Total correspondence sent and received represents about 9 percent of all household mail volumes (see Table E-2). Personal correspondence mail has declined for more than 15 years. In 1987, households reported receiving about 2.3 pieces of correspondence mail per week, of which 1.6 pieces were personal correspondence. By 2006, personal correspondence received declined by about a third, to 1.0 piece per household per week, while overall correspondence received declined by about 0.1 pieces per week. Table 3.1 provides a recent history of total correspondence volumes.

To a large extent, the declines in correspondence mail were driven by changes in communication technology over that period. First, affordable long distance telephone service provided an alternative to personal letters and business inquiries, and then e-mail and the Internet completely transformed the marketplace.

Correspondence Mail and Household Characteristics

The following tables break down correspondence mail sent and received by households using the demographic categories developed in Chapter 2.

Income, Education and Age

Table 3.2 shows that both household income and educational attainment have a strong effect on correspondence received. However, as Table 3.3 shows, within a given educational category, income has much less of an effect on the amount of correspondence mail a household sends.

Table 3.1:
First Class Correspondence Mail Sent and Received by Sector

Sector	Volume *(Millions of Pieces)*			Change, 2004-2006
	2004	2005	2006	
HH to HH	6,561	5,870	6,064	-7.6%
NHH to HH	8,446	8,647	7,213	-14.6%

Tables 3.4 and 3.5 show that age also has a considerable effect on correspondence mail sent and received by households. Regardless of their income, younger households both send and receive fewer pieces of correspondence mail. Young adults have traditionally sent and received less mail than older adults, but the advent of the Internet age widened the gap between these two age groups.

Table 3.4:
Correspondence Mail Received by Income and Age
(Pieces per Household per Week)

Household Income *(Thousands)*	Age of Head of Household			Average
	Under 34	35 to 54	Over 55

Household Size

As expected, household size has a positive impact on correspondence mail. Tables 3.6 and 3.7 show that the jump from one person to two is associated with considerable jumps in correspondence mail volume, although further increases in size do not have nearly the same effect. As shown in Tables 3.8 and 3.9, these increases are generally due to the presence of an additional adult in the household.

Table 3.6:

Internet Access

Households with Internet access also tend to send and receive more correspondence mail than households without. The explanation for this somewhat counterintuitive result is the high correlation among income, educational attainment, and the presence of an Internet connection in the home. Households with Internet access have a greater average income ($69,000 for Broadband and $55,000 for Dial-up users) than households without ($36,000). Similarly, households with Internet access have a higher level of education (40% of Broadband users and 33% of Dial-up users have a

college degree) than households without (11% have a college degree). In fact, these correlations could be a warning sign for mail, since more volume goes to households that are vulnerable to diversion.

Table 3.10:

Personal Correspondence

In FY 2006, personal correspondence accounted for an average 1.0 pieces per week, .1 less then in 2005. Table 3.12 shows the total volumes and average number of pieces by personal correspondence type.

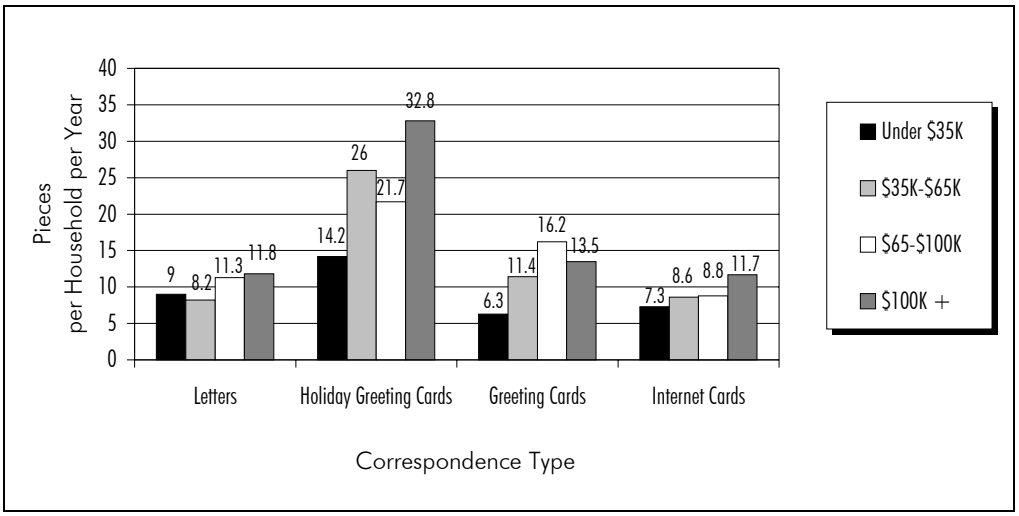

The drop in personal non-holiday greeting cards accounts for most of the per-household decrease in personal correspondence mail between 2004 and 2006, continuing a long-term decline. The number of Internet greeting cards declined by a much greater percentage than mailed correspondence.

Table 3.12: Personal Correspondence Sent and Received

Correspondence Type	Volume *(Millions of Pieces)*			Change, 2004-2006
	2004	2005	2006

(Pieces per Household per Year)

Source: Household Diary Study, FY 2006.

Figure 3.2:
Total Personal Correspondence Sent by Age Cohort
(Pieces per Household per Year)

Source: Household Diary Study, FY 2006.

Figure 3.1 shows the major personal correspondence types by income. Personal correspondence sent by households varies with household income (Fig. 3.1). Households with incomes over $100,000 were more likely to send letters, holiday greeting cards and Internet cards than lower-income households in 2006. The largest disparity between high- and low-income households is in the volume of holiday greeting cards sent. Households with incomes over $100,000 sent an average of 33 holiday greeting cards during the 2005 holiday season (FY 2006), compared to the 14 sent by households with incomes under $35,000. There seems to be a direct relationship between household income and use of Internet greeting cards.

The number of letters and greeting cards sent varies across age groups (Fig. 3.2). Households where the head is 55 years of age or older sent more letters and holiday greeting cards through the mail. Households aged 55 or older sent an average of twelve letters and 34 holiday greeting cards in 2006. They also sent an average of 13 non-holiday cards.

In comparison, households under the age of 35 sent an average of six letters and eleven holiday greeting cards per year in FY 2006, along with eight non-

holiday cards. Households whose heads are under 35 years old sent about twenty four percent more (10) Internet cards than traditional, mailed non-holiday greeting cards in FY 2006, while households whose heads are 55 or over sent only half as many Internet cards (6) as they sent traditional cards through the mail.

The relationship between holiday greeting cards received and income and age is shown in Figure 3.3. For most income categories, the number of holiday greeting cards received in 2006 was about the same as in 2004. Households with incomes over $100,000 received the greatest number of holiday greeting cards during FY 2006 (32.8), up significantly from 20.3 in FY 2004. Households with incomes between $65,000 and $100,000 received fewer holiday cards in 2006 than in 2004.

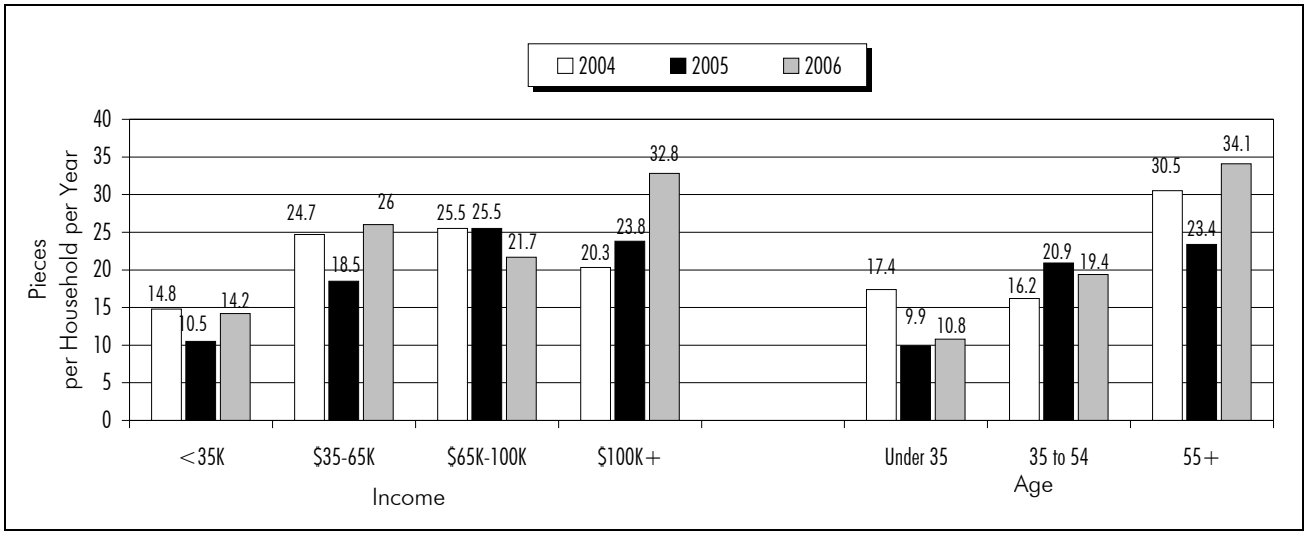

The number of holiday greeting cards received increased since 2004 for all age categories, with the exception of the under 35 age group.

Households where the head of household is age 55 or older received the largest average number of holiday greeting cards – an average of 34.1 pieces in 2006 compared to the 30.5 pieces received in 2004.

As shown in Table 3.13, households with Internet access (including both broadband and dial-up) receive more letters and greeting cards, compared to households without Internet access. These households also send more correspondence. As stated above, this is largely due to the correlation between income, education, and the presence of an Internet connection in the home.

In examining household Internet use, we find that 89 percent of all persons who have Internet access send at least one personal e-mail during a typical day. Figure 3.4 shows the number of personal e-mails sent and received in a typical day by those that have used e-mail in the past 12 months.

Business Correspondence

Outside of bill payment, statements and advertising, which are discussed in Chapters 4 and 5, households and businesses exchange many types of correspondence. Table 3.14 outlines volumes by correspondence type 2004 through 2006.

Correspondence received from the non-household sector accounts for 48 percent of total correspondence volumes. Invitations and announcements comprise the largest correspondence volumes from nonhouseholds (5.0 billion).

Table 3.14: Correspondence Type by Sector
(Millions of Pieces)

Chapter 4: Transactions

Introduction

This chapter examines the volumes and trends in transactions mail; the bills, statements, payments, donations, rebates, and orders sent and received by households. Information is presented on household bill payment trends, especially in light of electronic alternatives to traditional mail payments.

Transactions Mail Volume

Transactions sent and received comprise about 25 percent of all household mail volumes (as seen in Table E-2) and 58 percent of household First-Class Mail; as such, they are an important part of the mailstream. Although many businesses now use electronic funds transfer (EFT) or other electronic technologies to settle transactions, households still pay a majority of their recurring bills through the mail. As the Internet becomes more ubiquitous, however, the movement towards consumer electronic bill presentment and payment (EBPP) is picking up.

Transactions comprise 53 percent of Household First-Class Mail.

As shown in Table 4.1, the total transactions volume dropped 2.2% since 2004. This decline was driven by a 19.3% drop in the volume of bill payments and was partly offset by an increase in both bill and statement presentments. Electronic diversion continues to erode the volume of mail payments in favor of online payments, automatic deductions from bank accounts and other electronic methods of bill payment. As a result, the share of bills paid by mail dropped from 26 percent of total mail transactions in 2004 to 21.6 percent in 2006.

Table 4.1:
Transactions Mail Sent and Received

Transaction Type	Volume *(Millions of Pieces)*			Change, 2004-2006

Transactions Mail and Household Characteristics

The following tables break down transactions mail sent and received by households based on the demographic categories introduced in Chapter 2.

Income, Education, and Age

As seen in Tables 4.2 and 4.3, household income and educational attainment influence the amount of transaction mail sent and received. The basis for this relationship is fairly clear; higher income and better-educated households, on average, have more financial accounts, insurance policies, and credit cards – all generators of transactions mail volume.

Table 4.2:
Transactions Mail Received by Income and Education
(Pieces per Household per Week)

Household Income *(Thousands)*	Educational Attainment of Head of Household				Average
	Less than High School	High School Graduate	Some College or Technical School	College Graduate	
Under $35	3.0	3.7	3.9	4.2	**3.6**
$35 to $65	4.6	5.2	5.9	5.4	**5.3**
$65 to $100	5.6	6.6	6.2	6.4	**6.4**
Over $100	6.2	7.1	7.1	7.5	**7.3**
Average	**3.8**	**5.1**	**5.5**	**6.2**	**5.3**

Table 4.3:
Transactions Mail Sent by Income and Education
(Pieces per Household per Week)

Household Income *(Thousands)*	Educational Attainment of Head of Household				Average
	Less than High School	High School Graduate	Some College or Technical School	College Graduate	
Under $35	1.1	1.4	1.2	1.3	**1.2**
$35 to $65	1.3	1.7	1.9	1.9	**1.7**
$65 to $100	2.1	2.0	1.9	1.8	**1.9**
Over $100	1.4	2.0	2.1	2.1	**2.1**
Average	**1.3**	**1.7**	**1.8**	**1.9**	**1.7**

Source: Household Diary Study, FY 2006.

Tables 4.4 and 4.5 also show that household age has a strong effect on transactions mail, independent of income. Across all income categories, households whose heads are under 35 years old send and receive less transactions mail. In part, this is due to the fact that younger households are less likely to own their home and have fewer insurance policies. However, it is also the case that these households are more active users of electronic alternatives to traditionally mail-based transactions. This is especially conspicuous for transactions mail sent by households (primarily bill payments), where households under 35 years old sent only about 67 percent as much mail as older households.

Across all income categories, households whose heads are under 35 years old send and receive less transactions mail.

Table 4.4:
Transactions Mail Received by Income and Age
(Pieces per Household per Week)

Household Income *(Thousands)*	Age of Head of Household			Average
	Under 35	35 to 54	Over 55	
Under $35	3.1	3.6	3.9	**3.6**
$35 to $65	4.7	5.5	5.6	**5.3**
$65 to $100	5.4	6.4	7.0	**6.4**
Over $100	6.5	7.4	7.6	**7.3**
Average	**4.5**	**5.7**	**5.4**	**5.3**

Table 4.5:
Transactions Mail Sent by Income and Age
(Pieces per Household per Week)

Household Income *(Thousands)*	Age of Head of Household			Average
	Under 35	35 to 54	Over 55	
Under $35	.7	1.2	1.6	**1.2**
$35 to $65	1.3	1.6	2.1	**1.7**
$65 to $100	1.7	1.9	2.3	**1.9**
Over $100	1.4	2.1	2.4	**2.1**
Average	**1.2**	**1.7**	**2.0**	**1.7**

Source: Household Diary Study, FY 2006.

Household Size

In terms of household size, Tables 4.6 and 4.7 show that going from a one-person household to a two-person household adds about 2.0 pieces of transaction mail per week sent and received, but higher household size has little effect on volume.

Table 4.6:
Transactions Mail Received by Household Size
(Pieces per Household per Week)

Household Size	
One person	3.7
Two	5.2
Three	5.7
Four	6.3
Five or more	6.2
Average	**5.3**

Source: Household Diary Study, FY 2006.

Table 4.7:
Transactions Mail Sent by Household Size
(Pieces per Household per Week)

Household Size	
One person	1.4
Two	1.9
Three	1.6
Four	2.0
Five or more	1.4
Average	**1.7**

Source: Household Diary Study, FY 2006.

For transactions mail received, Table 4.8 shows that each additional adult adds about 1.5 pieces of mail per week. According to Table 4.9, however, one additional adult generates only .5 pieces of extra mail sent and further changes have little effect on volume.

Table 4.8:
Transactions Mail Received by Number of Adults in Household
(Pieces per Household per Week)

(Pieces per Household per Week)

Number of Adults in HH	
One	1.3
Two	1.8
Three or more	1.9
Average	**1.7**

Source: Household Diary Study, FY 2006.

Internet Access

Interestingly, Tables 4.10 and 4.11 show that households with Internet access both send and receive more transactions mail, even though the presence of an Internet connection in the home should make that household's transactions more susceptible to electronic diversion. As discussed in Chapter 3, this apparent contradiction is explained in large measure through the fact that household Internet access is strongly correlated with income and education. Additionally, Table 4.11 shows that, while the number of transactions sent by households with Broadband is greater than for households without access, it is also lower than the number for Dial-up users. This is an indication that diversion of bill payments and other transactions is likely to increase as more households upgrade to Broadband.

Table 4.10:
Transactions Mail Received by Internet Access
(Pieces per Household per Week)

Type of Internet Access	
Broadband	6.2
Dial-up	5.5
None	3.9

Broadband	1.7
Dial-up	1.8
None	1.5
Average	**1.7**

Source: Household Diary Study, FY 2006.

Bill Payment

The average number of bills paid per month per household in 2006 was 11.9 – about the same as in 2004 (12.0). Households use a variety of methods to pay bills. Historically, they have been paid in person, via phone, or by mail. In the past decade, emerging technologies provided additional bill receipt and payment options. The most important of these are automatic deduction and on-line bill payment. The Household Diary Study measures bill payment by all of these methods. Table 4.12 shows

the percentage of households who pay bills by each method and the average number of bills paid per month by each method.

About ninety-two percent of households pay at least one of their bills by mail, and the average number paid by mail per household is 7.4 per month, down 11% from 2004 when the average number of bills paid per month by mail was 8.3. Other popular bill payment methods are automatic deduction from bank account (53 percent of households), in-person (35 percent) and, more recently, using the Internet (33%).

However, the number of actual bills paid by these methods is relatively small (an average of 1.3, 0.7 and 1.8 pieces per month, respectively).

Notably, households reported paying more monthly bills in 2006 than in 2004 by electronic methods only. Online payments increased particularly fast recently, growing 64% since 2004. As a result, in 2006, almost as many payments are made using the Internet as by all other electronic methods combined. As Figure 4.1 shows, electronic methods account for a growing share of household bill payments over time.

In fact, since 2004, the average number of bills paid by these methods increased by almost 40 percent, largely at the expense of the mail, which dropped more than 10%. Figure 4.2 shows that automatic deductions almost tripled since 1998. Given the continuing penetration of the Internet into everyday life, and the increasing affordability and popularity of broadband connections, we expect the trend away from traditional mail to continue in the future.

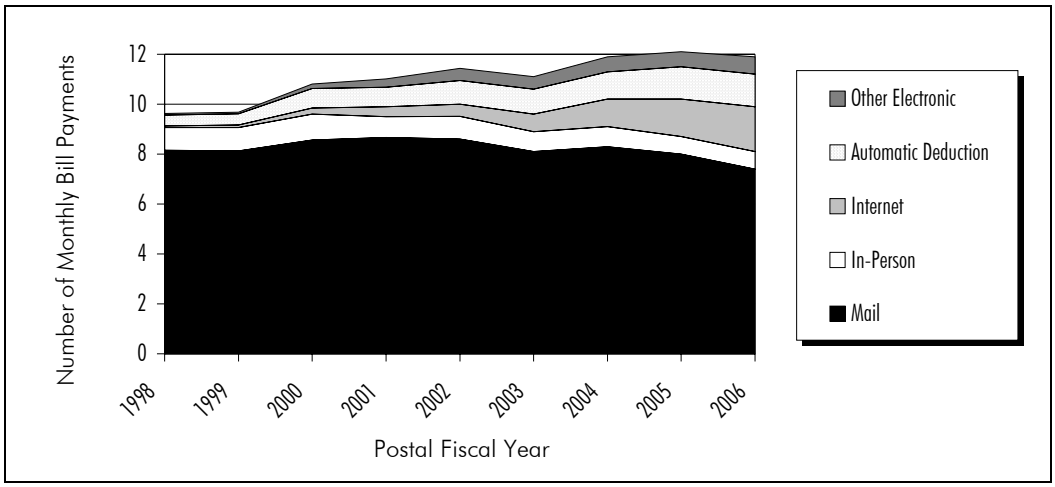

Since 2004, the average number of bills paid by electronic methods increased by almost 40 percent.

Table 4.12:
Bill Payment by Method, FY 2004, 2005, and 2006

Bill Payment Method	2004	2005	2006		
	Average Number of Bills Paid per Month	Average Number of Bills Paid per Month	Average Number of Bills Paid per Month	Share of Bills Paid	Percent of Households Using Method

Average Monthly Automatic Deductions per Household

Source: Household Diary Study, FY 1998-2006.

The types of bills paid by mail are shown in Table 4.13. There has been little change in the type of bills and the percentages paid by mail since 2004. Sixty-nine percent of households pay their telephone bills by mail, followed by electric bills (66 percent), credit card bills (62 percent), natural gas/other fuel bills (55 percent), and water/sewer bills (50 percent).

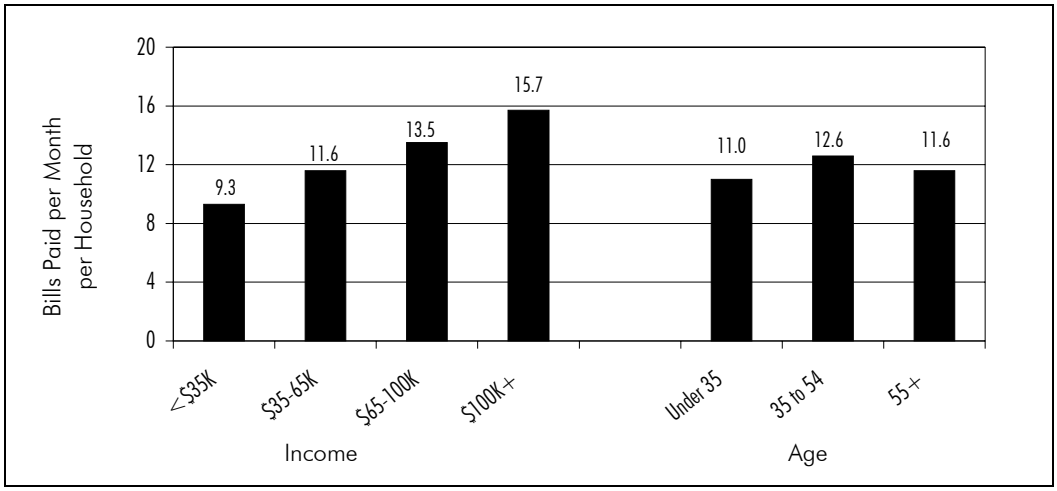

The Household Diary Study finds that the number of total bills paid per month varies by age and income, as does the choice of methods used for bill payment. Figure 4.3 shows the total average number of bills paid per month for each income and age group.

Table 4.13:
Top Bills Paid by Mail

Bill Type	Percent of Household		
	2004	2005	2006
Telephone	71%	72%	69%
Electric	69%	68%	66%
Credit Cards	62%	67%	62%
Natural Gas/ Propane/Fuel	55%	54%	55%
Water/Sewer	50%	49%	50%

Source: Household Diary Study, FY 2004, 2005 and 2006.

Figure 4.3:
Average Bills Paid per Month by Income and Age

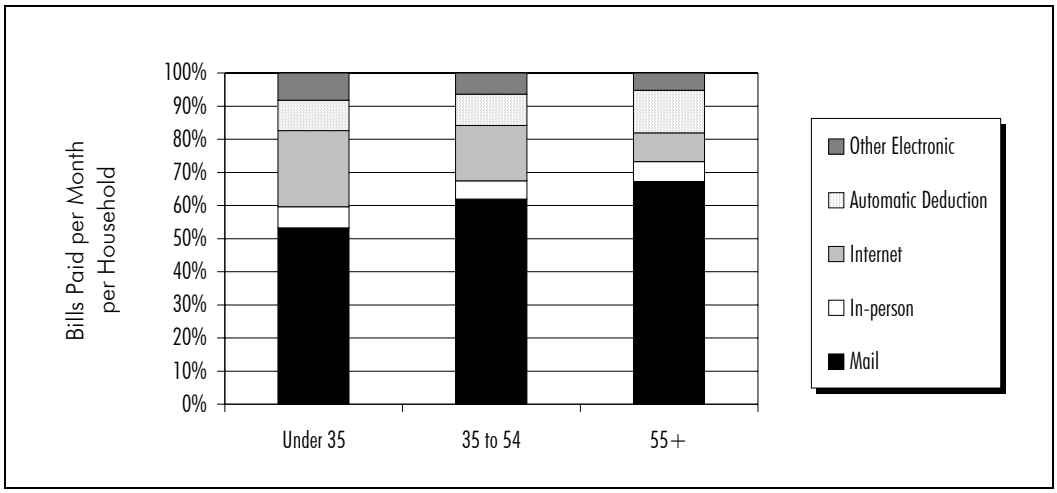

Source: Household Diary Study, FY 2006.

Unsurprisingly, the number of bills paid per month is positively related to household income. Households with incomes over $100,000 paid an average of almost sixteen bills per month in FY 2006, compared to the nine bills paid by households with incomes under $35,000. Age has a slightly different relationship with bill payment levels in that younger households (under age 35) and older households (age 55+) pay fewer bills than households where the head of household is between 35 and 54.

More of the bills that younger households pay are paid electronically. As shown in Figure 4.4, the younger the head of a household is, the more likely it is that that household will pay bills electronically. Younger households pay a little more than 50 percent of their bills by mail, and more than 40 percent electronically. Compare that to older households who pay almost 70 percent of bills by mail, and only about 25 percent electronically. The greatest divergence is in Internet bill paying, where younger households pay 23 percent of bills using the Internet, while older households pay nine percent using this method.

Figure 4.4:
Bill Payment Method by Age

Source: Household Diary Study, FY 2006.

Bills and Statements Received

Table 4.14 shows the overall volume of bills and statements received. The largest volumes of bills originate from credit card companies (3.8 billion), utility companies (2.5 billion), telephone companies (2.3 billion), and insurance companies (2.2 billion). Statements received are predominantly sent by the financial sector, including banks, insurance companies, and other financial institutions such as brokerage firms. Overall, the volume of statements received by households from the financial sector increased since 2004. This year, U.S. households received a total of 6.2 billion statements from financial institutions. In 2004, that figure was 5.8 billion.

About 44 percent of First Class Mail received by households is bills and statements. In FY 2006, households received 19 billion bills. This number is about 3% greater than in 2004, but since the number of households increased, the average number of bills per household has remained about constant. The number of statements received through the mail in FY 2006 increased overall. As shown in Figure 4.5, the number of statements received by mail increased in households with income between $65,000 and $100,000. Households in other income categories received about the same number of statements as in 2003.

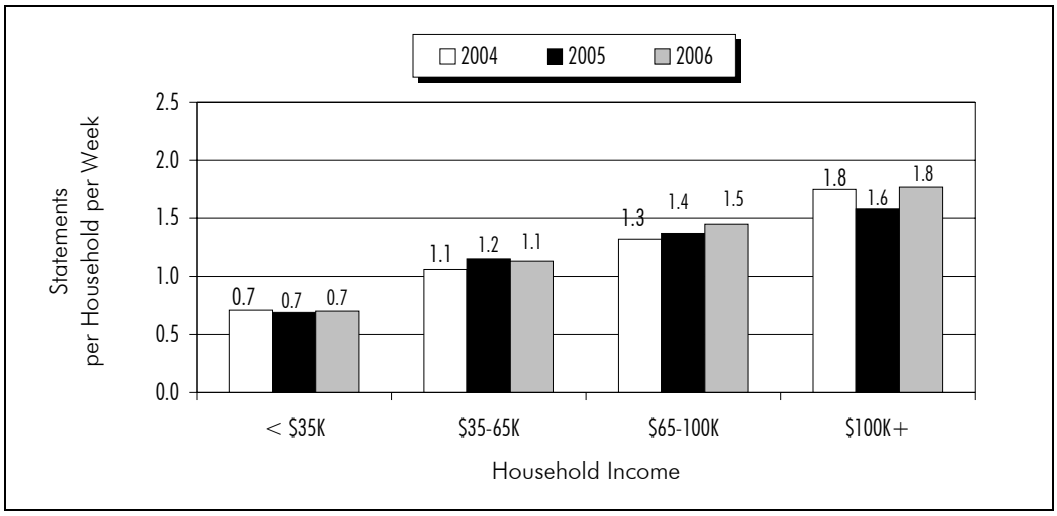

Although the number of bills households receive through the mail is about constant on a per household basis, the number of bills received over the Internet is growing rapidly, albeit from a small base. Table 4.15 shows the average volume of bills received by mail and over the Internet.

Chapter 5: Advertising Mail

Introduction

This chapter examines advertising mail, which is any advertising, promotional, or sales material sent through the Postal Service. Advertising mail can be sent as First-Class or Standard Mail.

The Advertising Market

According to McCann-Erickson, American businesses spent about $285 billion in 2006 advertising their products and services, an increase of 3.3 percent over 2005. Of this total advertising spending, 21 percent was spent on direct mail.

In 2006, 21 percent of total advertising dollars was spent on direct mail advertising.

Direct mail was the leading media choice of advertisers in 2006, followed by newspapers and television. Direct mail advertising spending increased 5.8 percent from 2005, outpacing the growth in all media categories, except for Internet spending, as shown in Table 5.1.

Table 5.1:
U.S. Advertising Spending by Medium, 2004-2006
(Billions of Dollars)

Medium	2004	2005	2006	Percent Change 2005-2006
Direct Mail	$52.2	$56.6	$59.9	5.8%
Newspapers	$46.9	$47.9	$47.7	-.4%
Television	$46.0	$45.3	$47.1	4.0%
Radio	$19.8	$20.0	$19.6	-2.0%
Magazines	$12.1	$12.9	$13.4	3.9%
Internet	$7.1	$7.9	$9.3	17.7%
All Other	$79.5	$85.5	$88.0	2.9%
Total	**$263.7**	**$276.0**	**$285.1**	**3.3%**

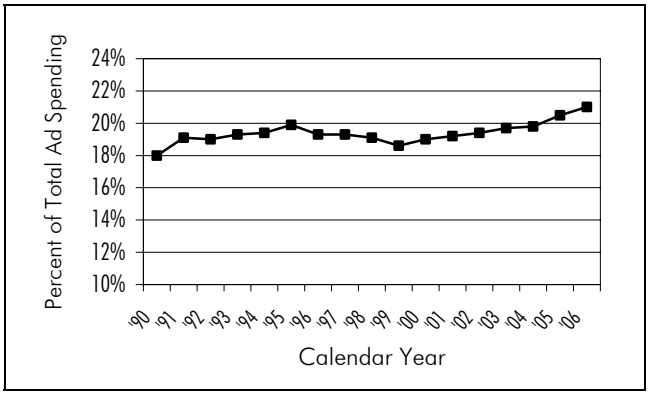

Source: McCann-Erickson – estimates.
Note: Totals may not sum due to rounding.

Despite many changes to the U.S. economy over the past few years, direct mail continues to be the most popular advertising choice. It is a highly efficient and versatile method for communicating with consumers. Direct mail can be targeted to the interests of individual customers. It can be used both to locate new customers and maintain relationships with existing customers. Direct mail allows for a variety of different types of advertising: letters, postcards, catalogs, and free samples. It can be sent as First-Class or Standard Mail, allowing advertisers to trade off their interest in more timely, personalized First-Class mailings against cost savings from Standard Mail.

Importantly, the effectiveness of direct mail is readily measurable, more so than for any other media shown in Table 5.1. Businesses can track the response rate to a mailing far more precisely than for a television commercial or magazine advertisement. This feature alone gives advertising mail a key advantage over its competitors.

Figure 5.1 shows that direct mail's share of total advertising spending has been on a strong upward trend for most of the past 16 years. Since 1999, the direct mail share has risen steadily reaching 21 percent in 2006. Direct mail has maintained its large ad share even with the introduction of new, fast growing ad markets such as the Internet.

Figure 5.1:
Direct Mail as a Share of Total Advertising, 1990-2006

Source: U.S. Postal Service calculations based on McCann-Erickson WorldGroup data.

Advertising Mail Volumes

Households received 105 billion pieces of advertising mail in 2006, up from 94.8 billion in 2004. Advertising mail represented about 62% of all mail received by households in 2006.

> Advertising mail represented 62 percent of all mail received by households in 2006.

Table 5.2 shows that First-Class advertising mail accounts for 17.9 billion pieces, or 17 percent, of all advertising mail received by households. Of this First-Class advertising mail, 9.7 billion pieces are advertising only, while the other 8.3 billion pieces are secondary advertising, such as an advertisement enclosed with a bill. First-Class advertising mail volumes were adversely affected prior to 2005, primarily from diversion to Standard Mail advertising. However, in 2005 it increased almost back up to 2002 levels and in 2006 remained relatively unchanged, resulting a 10% increase over 2004. Overall advertising mail to households has grown steadily for the past three years.

On average, U.S. households each receive 17.7 pieces of advertising mail per week; 17 percent of that is First-Class advertising. Comparatively, in 2004, U.S. households received an average of 16.3 pieces of advertising mail per week; as in 2006, First-Class advertising was about 17 percent of total advertising mail received by households.

About 83 percent of all advertising mail received by households in 2006 was sent as Standard Mail, which equates to a total of 86.8 billion pieces. This represents an 11 percent increase over 2004.

Over 88 percent of the increase in Standard Mail advertising volumes are found in Regular and ECR mail. In 2006, households received an average of 12.3 Presorted Standard or Bulk Rate mail pieces per week, up from 11.2 in 2004. The exceptional growth in this class of Standard Mail advertising results from constant postal rates for over four years, diversion from First Class Mail advertising, strong growth in Direct Mail advertising spending and a strong overall economy.

> Standard Mail accounts for 83 percent of total advertising mail.

Table 5.2:
Advertising Mail by Mail Classification
(Volume in Billions of Pieces)

Advertising Mail and Household Characteristics

Income, Education, and Age

As advertising mail is used to sell goods and services, it's not surprising that the amount of ad mail received by a household is closely tied to income and education.

The relationship between advertising mail and household income is quite strong, as seen in Table 5.4. Households with less than $35,000 income receive less than half as much advertising mail as households with $100,000 or more income (11.7 pieces per week compared to 26.8). Table 5.4 also shows that education plays a key role in the amount of advertising mail households receive, even after accounting for the impact education has on income.

For example, among households earning under $35,000, ad mail received per week increases as the educational status of the household head increases, rising from 10.4 pieces per week for households headed by someone without a high school degree to 14.1 pieces per week for households headed by a college graduate. The pattern is repeated across all income groups, with more ad mail received as education increases.

The role that education plays in advertising mail is two-fold. First, direct mail is a written communication and education may play some role in its relative effectiveness compared to television or radio advertising. Second, education is not only tied to current household income, but also future household income. A college graduate who currently has a relatively low income may, in a few years, have a much higher income.

Table 5.4: Ad Mail Received by Income and Education
(Pieces per Household per Week)

Household Income *(Thousands)*	Education of Head of Household				Average
	Less than High School	High School graduate	Some College or Technical School	College graduate	
Under $35	10.4	11.7	12.4	14.1	**11.7**
$35 to $65	13.1	15.6	17.6	18.2	**16.3**
$65 to $100	17.9	19.8	20.8	22.9	**21.1**
Over $100	13.3	23.8	26.6	29.0	**26.8**
Average	**11.9**	**15.9**	**18.2**	**22.5**	**17.6**

Source: Household Diary Study, FY 2006.

Table 5.5 shows that households headed by older people receive more advertising mail than those headed by younger people. For every income group, advertising mail received increases as the age of the head of the household increases. In part, this is because age is correlated with other characteristics like marriage, home ownership, and the presence of children in the household.

Moreover, the older a person is, the longer his or her buying history and the more businesses with which the person has had a relationship that advertising mail can help maintain. Households with incomes over $100,000 and with a head of household age 55 and older received the greatest number of advertising mail pieces at 28.6 pieces per week.

The amount of advertising mail received increases as income, education and household size increases.

Table 5.5:
Ad Mail Received by Income and Age
(Pieces per Household per Week)

Household Income *(Thousands)*	Age of Head of Household			Average
	Under 34	35 to 54	Over 55	
Under $35	8.0	10.1	14.7	**11.7**
$35 to $65	12.5	15.4	19.8	**16.2**
$65 to $100	16.9	21.1	24.6	**21.1**
Over $100	23.1	27.2	28.6	**26.8**
Average	**13.0**	**18.4**	**19.7**	**17.6**

Source: Household Diary Study, FY 2006.

Household Size

Tables 5.6 and 5.7 show advertising mail received increases as the household size (Table 5.6) and number of adults in the household (Table 5.7) increase. While this is evident in looking at changes in household size, the greatest change in the number of pieces of advertising mail received is seen in the number of adults in the households.

Table 5.6:
Ad Mail Received by Size of Household
(Pieces per Household per Week)

Household Size	
One person	14.0
Two	18.7
Three	18.4
Four	18.8
Five or more	16.8
Average	**17.6**

Source: Household Diary Study, FY 2006.

As shown in Table 5.7, households with three or more adults receive 44 percent more advertising mail than a household with only one adult. This represents an increase from an average of 13.5 pieces per week to 19.5 pieces per week. Note, however, that most of this increase occurs when the number of adults increases from one to two, indicating a strong impact stemming from the likelihood of it being a two-income household.

Table 5.7:
Ad Mail Received by Number of Adults
(Pieces per Household per Week)

Number of Adults	
One	13.5
Two	18.4
Three or more	19.5
Average	**17.6**

Source: Household Diary Study, FY 2006.

Internet Access

Finally, Table 5.8 shows the relationship between advertising mail received and Internet access. Despite all the attention paid to online and e-mail advertising, households with Internet access receive more advertising mail than those without access.

To a large degree, this reflects other household characteristics; Internet access is closely tied to income and education. However, advertising mail continues to be sent even when new advertising media are available. In addition, Table 5.8 may demonstrate the use of Internet information to target potential customers through direct mail advertising.

Table 5.8:
Ad Mail Received by Internet Access
(Pieces per Household per Week)

Type of Internet Access	
Broadband	20.9
Dial-up	17.4
None	13.1
Average	**17.6**

Source: Household Diary Study, FY 2006.

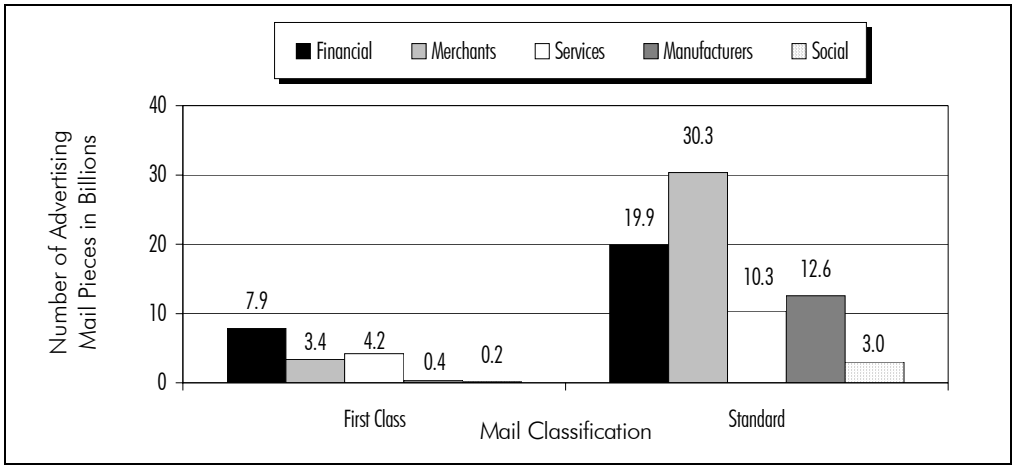

Senders of Advertising Mail

Figure 5.2 provides data on the senders of advertising mail to households. Merchants continue to be the largest senders; in 2006, they sent nearly 40 percent of Standard advertising mail and 21 percent of First-Class advertising mail. Financial firms are the second largest sender and the largest sender of First-Class advertising (49 percent). Many bills and statements, especially those for credit cards, include advertising.

Attitudes Toward Advertising

With $285 billion spent in the United States on advertising, it is not surprising that few households wish they received more.

Figure 5.2:
Advertising Volumes for First-Class and Standard Mail Advertising by Sender Type

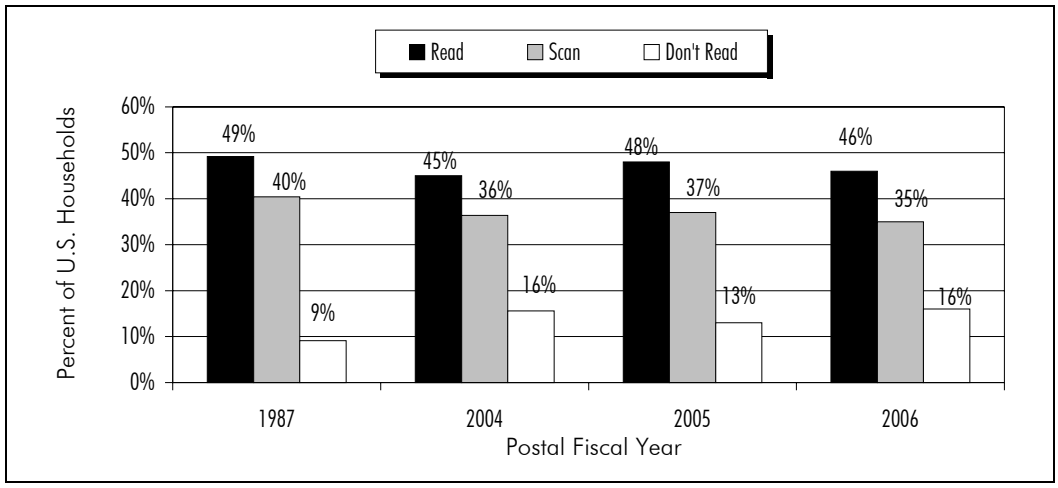

Source: Household Diary Study, FY 2006.
Base: First-Class and Standard Advertising Mail Pieces excluding Unsolicited Samples and pieces for which no industry of sender was given.

Whether they wish to receive more or not, most households either read or at least scan their advertising mail. Figure 5.3 shows 46 percent of households usually read their advertising mail, while an additional 35 percent scan the mail. Only 16 percent of households report they do not usually read their advertising mail. This represents an increase from the nine percent who did not usually read advertising mail in 1987, but given the large increase in advertising mail volumes since then, it is clear that U.S. households read more advertising mail now than in the past.

Eighty-one percent of households either read or scan advertising mail sent to their household.

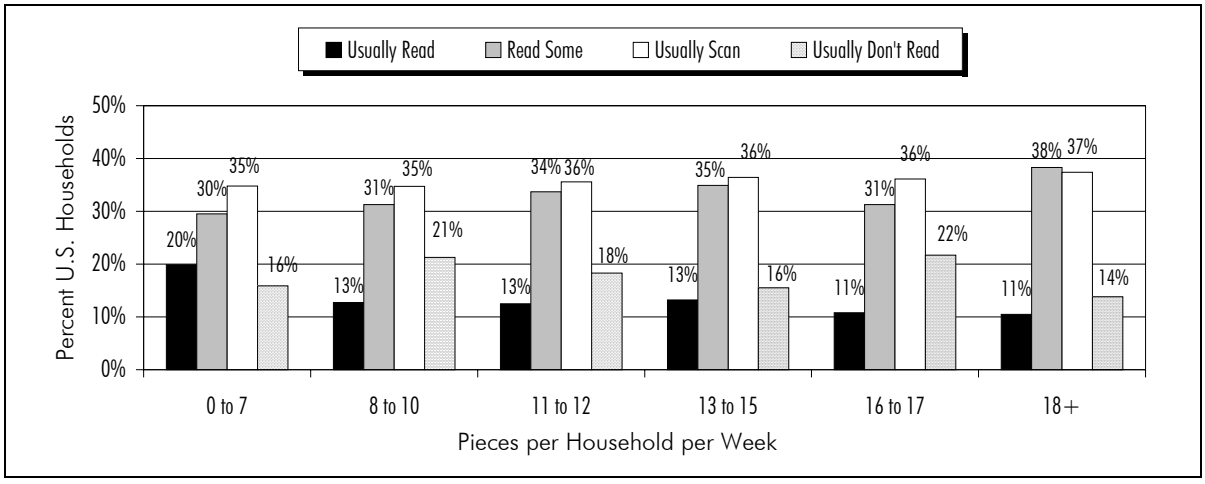

Figure 5.3: Advertising Mail Behavioral Trends — 1987, 2004, 2005 and 2006

Source: Household Diary Study, FY 1987, 2004, 2005 and 2006.
Note: Percentages do not include those who did not provide a response.

Another interesting result is found in Figure 5.4. Household behavior toward advertising mail is largely independent of how much advertising mail the household receives. For example, among households that receive zero to seven pieces of advertising mail per week, 50 percent usually read all or some of the mail and 16 percent usually do not read any. Among households that receive eighteen or more pieces per week, 49 percent usually read all or some and 14 percent usually do not read any. Thus, households that receive a lot of advertising mail don't appear to be particularly "turned off" by the high volume.

Figure 5.4: Treatment of Standard Advertising Mail by Number of Standard Mail Pieces Received per Week

Source: Household Diary Study, FY 2006.

Effectiveness of Advertising Mail

Ultimately, advertisers send direct mail because it works – household members read and respond to it. Table 5.9 presents the intended response of households to advertising mail. Households report that they intend to respond to about one in ten pieces of advertising mail, with the intended response to Standard mail being greater than for First-Class advertising (11 percent and 8 percent of pieces, respectively). The table also shows that households say they may respond to another 17 percent of Standard advertising and 11 percent of First-Class advertising. This is not to say that a similar mail piece would receive a higher response rate if mailed via Standard Mail; it is more likely the result of a different mix of advertising in Standard Mail. For example, catalogs are routinely mailed Standard Mail, but infrequently mailed First-Class.

Figure 5.5 presents the total number of responses to advertising mail by income. As illustrated in Tables 5.4 and 5.5, higher income households received more advertising mail. Figure 5.5 combines the data on the amount of advertising mail received by household income with the household's intended response to the mail. The result is the average number of responses per week for each income level. For example, households with incomes above $100,000 report they intend to respond to 2.1 pieces of advertising mail per week, and they may respond to another 4.0 pieces per week. Other high-income households also indicate they will respond to more than one piece of advertising mail per week, as do many of the lower income households.

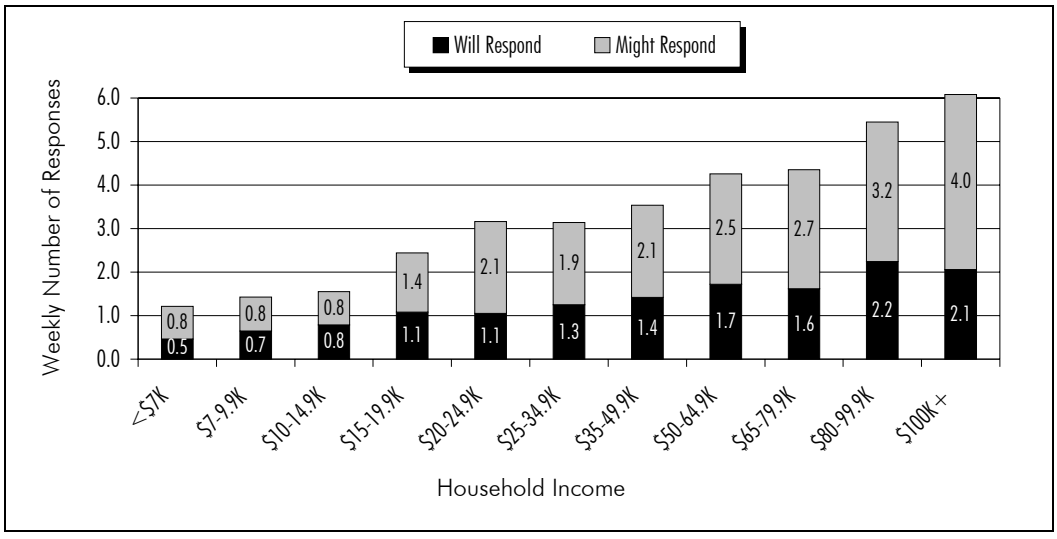

While intended responses do not always lead to actual responses, the data presented in Table 5.9 and Figure 5.5 help explain why direct mail is the number one choice of advertisers in America.

Table 5.9:
Intended Response to Advertising Mail by Class
(Percentage of Pieces)

Response	First-Class	Standard
Yes	8%	11%
Maybe	11%	17%
No	63%	59%
No Answer	18%	13%

Figure 5.5:
Weekly Number of Responses by Income

Chapter 6: Periodicals

Introduction

This chapter examines periodicals sent to households. Periodicals Mail consists of newspapers or magazines regularly sent to households, usually as part of a subscription. This chapter analyzes only periodicals delivered by the Postal Service to households. Newspapers or magazines delivered by a local carrier or purchased at a newsstand or store are not included in Household Diary data. The volumes examined here are only a portion of the total periodicals volume since more than one quarter of periodicals received by nonhouseholds go to doctors' offices or other businesses.

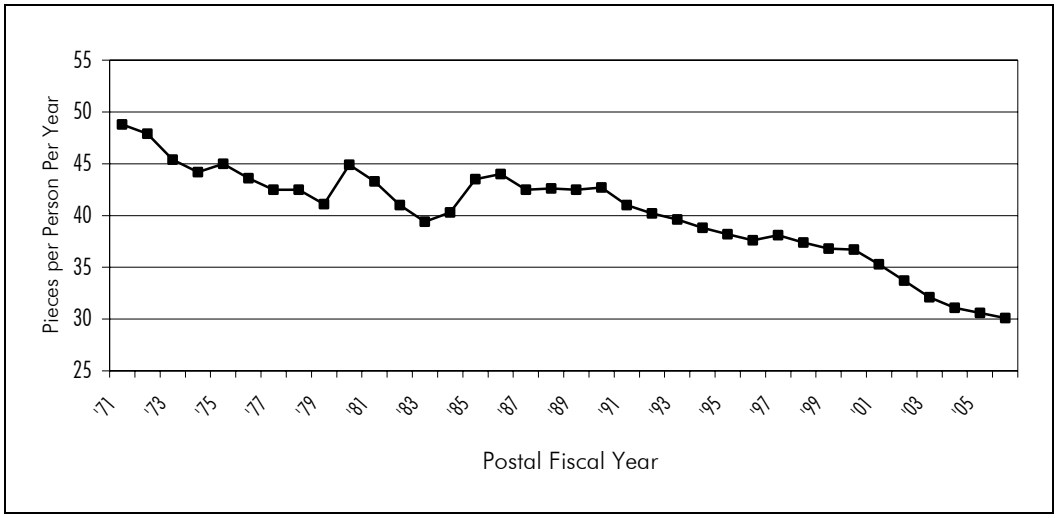

Historically, changes in total Periodicals Mail volumes have not kept pace with population growth.

The Periodical Market

Total Periodicals Mail volumes have not kept pace with population growth over time, as seen in Figure 6.1. In general, this is the result of a demographic shift due to people reading less today than they did a few decades ago. Periodicals volumes reached a peak in 1990 at 10.7 billion pieces, but declined each year since 1997, with the exception of FY 2000. In that year, periodicals volumes were temporarily buoyed by an influx of advertising revenue during the dot.com boom. Since FY 2000, the volume dropped dramatically.

Historically, troughs in periodicals volumes have lagged economic slumps more so than with other types of mail, largely because it takes time for some subscription contracts to cycle out. After the most recent recession, periodicals volumes slipped not only because of reduced subscriptions, but also due to the number of publications that ceased operation as sources of advertising revenue dried up. Since then, in addition to the ongoing demographic shift away from reading, volumes continued to fall as the Internet became an increasingly accepted substitute for hard-copy publications.

Figure 6.1:
Periodicals Mail Volume per Person – 1971 to 2006:
(Annual Pieces per Person)

Source: U.S. Postal Service, U.S. Census Bureau.

Advertising's Impact on Periodicals

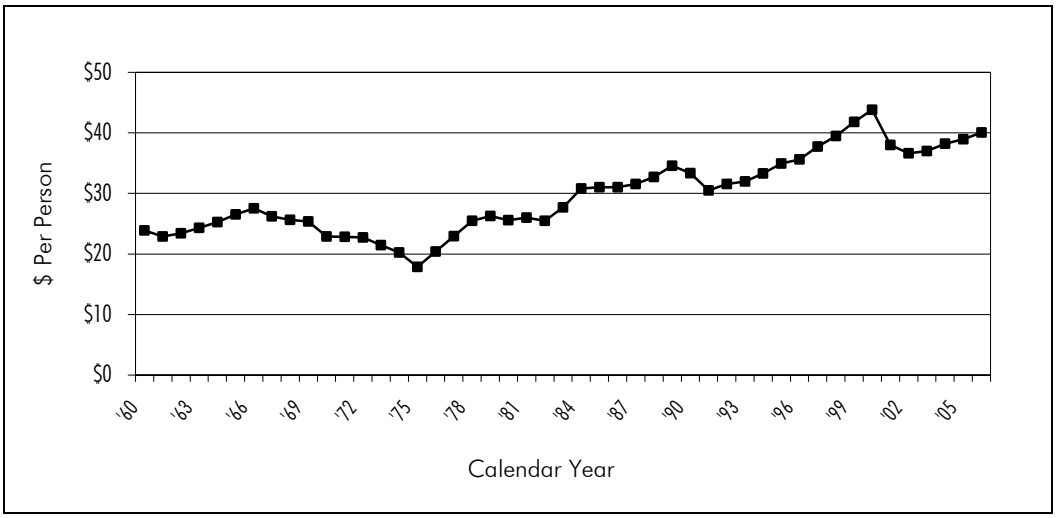

Advertising spending translates into advertising revenue, and the key determinant of magazine profitability is advertising revenue. The trend in advertising spending on magazines shifted to a lower level after its peak in 2000. This suggests that changes in available advertising revenues have altered the profitability of the magazine industry.

Advertising is a form of business investment. As with other investments, when the economy takes a turn for the worse, advertising tends to slow. By 2000, advertising as a percent of Gross Domestic Product (GDP) rose to a historically high level; when the high-tech bubble burst, advertising crashed. In 2001, advertising spending suffered its largest year-over-year decline in history. After four years of economic expansion, overall spending increased; magazine advertising spending also resumed its growth but at a slower pace than the years prior to 2001.

McCann Erickson projects that advertising spending will continue to grow in 2007, keeping pace with the expected growth in the overall economy. In prior times, this would bode well for new magazine launches as opportunities surface to capture new segments. More magazines in circulation generally translates into higher volume for the Postal Service, since, for most titles, the mail remains the primary distribution channel. More recently, however, the Internet has become a strong competitor of hard-copy publications. The Internet provides an alternative channel for news, information and entertainment. As a consequence, Periodicals volumes may be headed toward long-term decline.

Figure 6.2 shows the sharp decline in real per capita advertising spending for consumer magazines in 2001 and 2002 and the subsequent resumption in annual growth.

Figure 6.2:
Real Per-Capita Consumer Magazine Advertising Spending:

Source: McCann Erickson, U.S. Census Bureau.

Household Periodicals Volume

Periodicals represent about 4 percent of all household mail volumes (see Table E-2). Table 6.1 shows the breakdown of periodicals received by households. In FY 2006, households received 6.7 billion periodicals, the same as in FY 2004 and 2005. Seventy-three percent of all periodicals received by households were magazines, a strong increase since 1987, when the share was 59 percent.

In 2006, households received an average of 0.8 magazine per week. The most common type of magazine is monthly, accounting for two-thirds of the total magazines.

Newspapers make up 18 percent of total Periodicals volumes, down from the 35 percent share in 1987. The number of newspapers received per household each week declined from 0.6 to 0.2 during that same time period, while magazines only declined from 1.0 to 0.8 pieces per week.

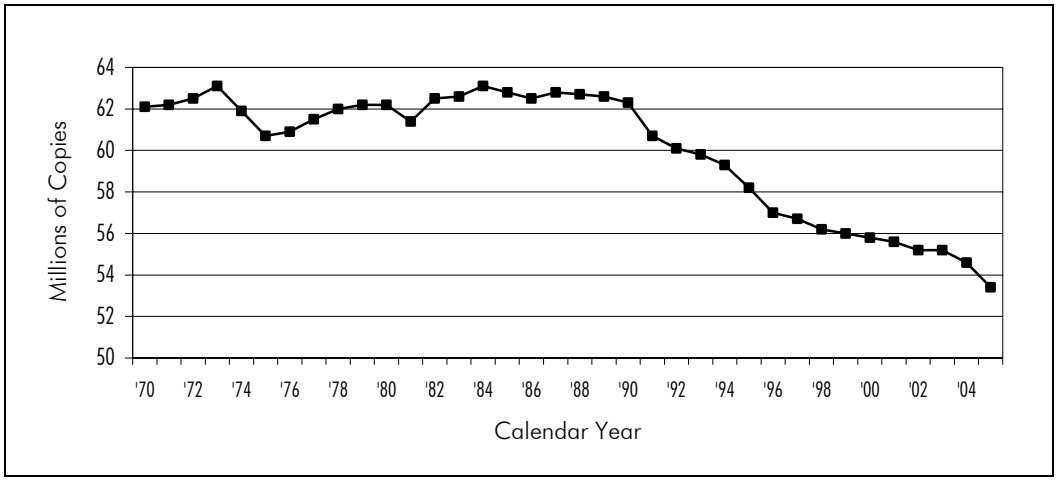

The decline in newspapers captured in the Household Diary study mirrors the behavior seen in overall newspaper circulation. As shown in Figure 6.3, newspaper circulation in general has declined since 1990. Of course, on a per capita basis, the decline is even more pronounced.

Table 6.1:

Note: Totals may not sum due to rounding.

Figure 6.3:
Newspaper Circulation:

Source: Newspaper Association of America.

Figure 6.4:
Daily Newspaper Readership – 1987 to 2006:

Source: Newspaper Association of America.
Note: There was a change in methodology in 1998.

Directly contributing to newspaper volume declines are changes in daily readership levels. As shown above in Figure 6.4, the percentage of the U.S. population reading newspapers on any given day decreased from 65 percent in 1987 to only 50 percent in 2006.

Daily newspaper readership overall has declined since 1987.

Declining newspaper readership and circulation are not the only contributors to the falling volume of newspapers received by households. With current technology and alternate delivery systems, national newspapers such as the *Wall Street Journal*, *The New York Times*, and *USA Today* deliver their papers to prime urban and suburban household customers before breakfast. Local printing/ distribution and morning delivery mean these copies no longer move through the mail.

Periodicals Mail and Household Characteristics

Income, Education, and Age

Table 6.2 shows that as income and education increase, periodicals volume tends to increase. Households where the head householder has a college education receive the most periodicals, averaging 1.5 per week. Similarly, households with incomes over $100,000 get an average of almost two periodicals per week, more than double what households earning less than $35,000 receive.

Households with incomes over $100,000 get more than double the number of periodicals that households earning less than $35,000 receive.

Table 6.3 shows periodicals volume by age and income. The higher the income and age of the household, the higher the volume of periodicals received. For households whose heads are under 34 and with incomes less than $35,000, the average is only 0.5 pieces per week. Households with income over $100,000 and whose heads are over 55 receive the most periodicals.

Table 6.2:
Periodicals by Income and Education
(Pieces per Household per Week)

Household Size

Table 6.4 and Table 6.5 show that as households increase in size, periodicals volume increases. In households with two adults, periodicals volume is higher than in households with only one, but the presence of additional adults beyond two has no effect on the receipt of periodicals.

Table 6.4:
Periodicals by Size of Household
(Pieces per Household per Week)

Household Size

Internet Access

As with many other types of mail, wired households receive more periodicals through the mail as shown in Table 6.6. And, as with those other types of mail, this is largely the result of the correlation between income, education, and Internet access. As household broadband access to the Internet becomes more common, it is likely that more periodical content will be delivered over the Internet, rather than by mail.

Table 6.6:
Periodicals by Type of Internet Access
(Pieces per Household per Week)

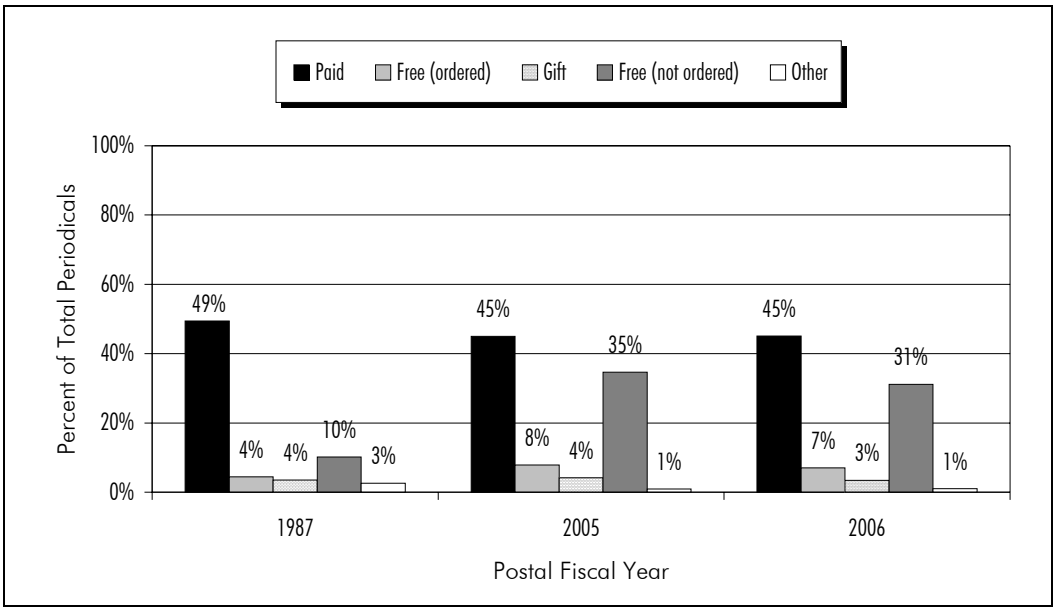

Type of Internet Access	
Broadband	1.3
Dial-up	1.2
None	.8
Average	**1.1**

Subscription Type

Figure 6.5 provides an overview of subscription type for FY 1987, 2005 and 2006. As shown, the distribution of subscription type has remained relatively stable over the last two years and similar to the distribution in 1987 period. In 2006, a household member ordered and paid for 45 percent of total periodicals sent to households. An additional 38 percent were free – either ordered by a household member or delivered to the household without a freestanding order, for example as a prerogative of membership in a professional, fraternal, or religious organization.

Figure 6.5:
Subscription Type by Year

Source: Household Diary Study, FY 1987, 2005 and 2006.
Base: Total Periodicals Mail volume - RPW.
Note: Percentages do not add to 100 due to the exclusion of periodicals sent to non-households and those to which no response was given as to subscription type.

Examining these volumes by sender type shows that commercial organizations sent more than any individual member organizations. Member organizations are professional affiliations, charitable, religious, and veterans' organizations, educational groups, and unions. As shown in Table 6.7, professional organizations combined account for 21 percent of total periodicals received by households. Charitable organizations account for only two percent of periodicals received by households.

Table 6.7:
Periodicals by Sender Type

Sender Type	Pieces per Household per Week	Percent of Periodicals Received by HH
Commercial Organization	.18	37%
Professional Organization	.10	21%
Religious Organization	.06	12%

Trends in Readership

A number of factors influence a household's receipt of periodicals. Several of these variables are demographic, while others are more behavioral in nature. In the past, income seemed to influence volume strongly, since periodicals are usually received through a paid subscription.

Typically, higher income households subscribe to more magazines and newspapers. The number of periodicals per household has declined for all income groups, but a new trend has begun to emerge where the decline in pieces per week has been more rapid for high-income households, as shown in Figure 6.6.

Figure 6.6:
Number of Periodicals Received Per Week by Households by Income Group

Chapter 7: Packages

Introduction

This chapter discusses packages sent and received by households. These packages can be mailed at a variety of rates. Documents are usually sent as First-Class Mail, Priority Mail, or Express Mail. Product samples usually travel as Standard Mail. Merchandise and goods can be any of these classes, or any of the Package Services subclasses, including Parcel Post, Bound Printed Matter and Media Mail.

The Package Market

The package delivery market is an important and growing segment of the economy. From 1997 to 2006, package volume grew from 7.1 billion pieces to 8.3 billion pieces, averaging about 2.0 percent growth per year. Package revenues increased from $39.6 billion to $60.4 billion over the same period, an average of five percent per year. Over that time, however, segments of the market performed differently.

There are three major segments of the package market:

- Overnight air,
- Two- and three-day air, and
- Ground.

The Postal Service is a major player in the two- and three-day air segment but provides services in all: Express Mail in the overnight segment, Priority and First-Class Mail in the two- and three-day segment, and Standard Mail and Package Services in the ground segment.

Table 7.1 shows the volume and growth rates of the three segments of the package delivery market. Between 1997 and 2000, the overall market grew consistently, driven by growth in the overnight and two-day and three-day air segments. This growth was largely due to expansion of the services offered by United Parcel Service (UPS) and Federal Express (FedEx). UPS began to push strongly into the overnight market, and both UPS and FedEx developed new two- and three-day offerings to compete with Priority Mail.

The recession in 2001 led to declines in all segments of the package market, with the largest effect in the two-day and three-day air segment as customers shifted to time-guaranteed ground service in the face of hard economic times. The slow recovery in 2002 continued to adversely affect all segments of the package market, except for ground. Ground began to pick up in 2002 at the expense of the other segments. This pattern continued through 2004. As a result, the ground segment accounts for more of the package market by volume than it has at any point over the last ten years (see Figure 7.1). In 2005 and 2006, the recovering economy boosted all segments of the package market.

From 1997 to 2006, package volume grew from 7.1 billion to 8.3 billion pieces.

Many carriers serve the package delivery market; FedEx, UPS, the United States Postal Service, and DHL are the larger players in the market. DHL's recent push in all market segments has intensified competition in what was already a very aggressive market. As seen in Table 7.2, the Postal Service lost market share in every segment over the last ten years. In part, this is a result of service enhancements made by competitors, such as the introduction of day-certain ground delivery. Competitors also include insurance, tracking and tracing services for all packages as part of the base shipping price, while the Postal Service charges extra fees for these services.

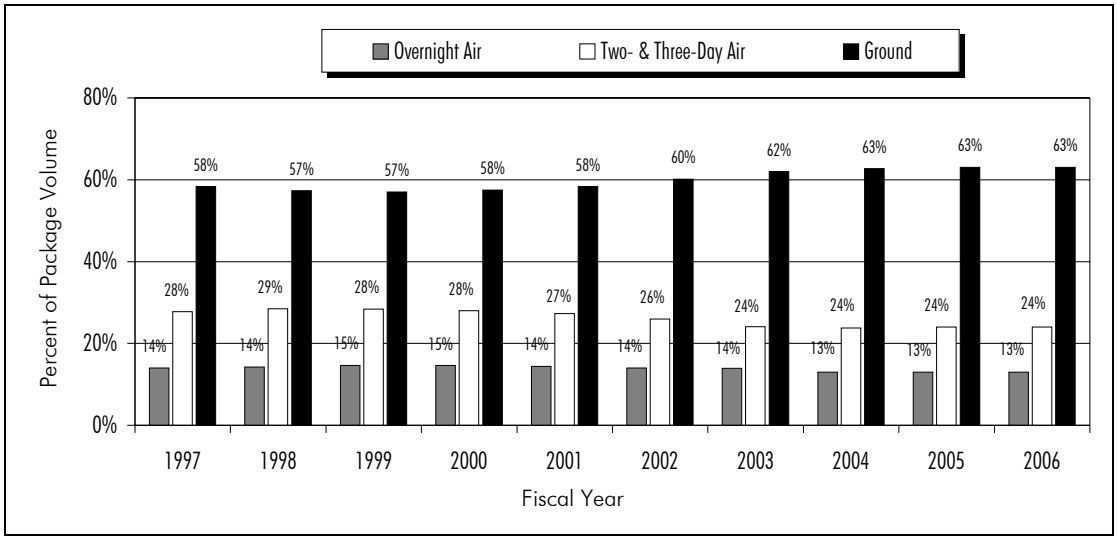

The Postal Service also serves a different niche in the package market than its competitors. Much more of the Postal Service's volume consists of relatively lightweight, low-revenue parcels delivered to households (see Tables 7.3 through 7.5). This is true even in the two- and three-day air segment, where the Postal Service carries the lion's share of the parcels.

Postal Service Package Volume

Compared to other mail, like letters and flats, the number of packages captured in the Household Diary Study is small, as most people do not receive packages on a regular basis and not all packages are delivered by the Postal Service. The interpretation of the results should be conducted with this in mind.

Postal Service package volume sent and received by households increased 8% in FY 2006 after falling almost 1% in FY 2005. Households sent 32 percent more packages in 2006 than in 2005, increasing their use of both First-Class and Priority Mail Package Services.

Households received 2.7 billion packages in FY 2006 and sent 673 million, as seen in Table 7.6. When the combined volumes are compared to FY 2004, First-Class, Expedited and Package Services sent by households increased by 6 percent in FY 2006. First-Class, Expedited and Package Services received by households increased by 29 percent compared to FY 2004. Expedited volume has increased over the last three years, due to an improving economy, constant rates and ease of use.

Expedited includes Priority Mail and Express Mail.

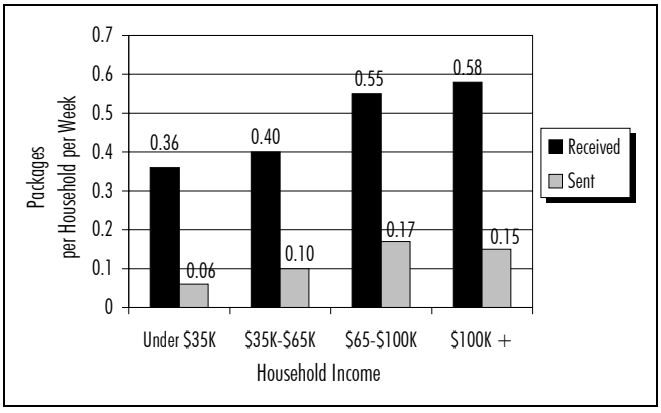

Packages and Household Characteristics

Income, Education, and Age

According to the HDS, high-income households sent and received more packages than their less affluent counterparts in FY 2006, as shown in Figure 7.2.

In fact, households with an income over $100,000 received 61 percent more packages then households with incomes under $35,000. Households headed by younger people on average received about the same number of packages as those with older heads of household, as shown in Table 7.7. Higher income younger households, however, seemed to receive many more packages. This may be the case because young heads of households make more purchases online than older ones. When it comes to sending packages, older households (over 55) sent fewer packages on average than younger households, as shown in Table 7.8.

The Household Diary Study indicates that households whose heads have college degrees tend to receive and send more packages on average than households with lower educational attainment. These results are shown in Tables 7.9 and 7.10.

Table 7.9:

Household Size

The Household Diary Study shows that larger households tend to receive and send more packages than smaller households, as shown in Tables 7.11 and 7.12. This, however, does not hold true for households with five or more members and is probably due to the likelihood that more children are present in very large households.

In FY 2006, households with Internet access sent and received more packages than households without Internet access.

Internet Access

Access to the Internet seems to play an important part in determining the number of packages sent and received by households. Tables 7.13 and 7.14 show the packages sent and received by households with Internet access and households without. In FY 2006, households with broadband Internet access sent four times as many and received more than double the number of packages sent by households without Internet access. These relationships probably reflect the correlation between income and Internet access.

Household Package Contents

As shown in Table 7.15, packages received by households most often contain music and videos, books, computer hardware, software and clothes – a sign that online purchases and mail order retail are primary drivers of household package volume. In fact, online purchases have contributed to a significant growth in music/video contents received. This type of content increased by more than any other type, growing from 10 percent of all content types in 2004 to 24 percent in 2006.

Households most often send music and videos, clothes, books, and toys. Primarily, this is due to the fact that so many household packages are sent in the holiday season, but it may also be evidence of the growing use of online sales and auction portals, such as eBay.

Table 7.15:

Appendix A: Comparative Tables 1987, 2005 & 2006

Concordance of Tables

This Concordance of Tables that follows provides detailed estimates concerning mail piece attributes, household mailing behavior and mean pieces per household per week for a variety of demographic characteristics.

The reporting of data in these tables was done using prior year definitions of key measures to maintain consistency. For this reason, these data may differ from that reported in tables in the report text. Where possible, we have provided information about the calculations (such as the "base") or other supplemental notes so that readers can interpret the findings appropriately.

Comparisons between 1987 and 2005/2006 data should be done with caution. The 2005/2006 data represent refinements in survey methodology from previous years, as well as modifications in the procedures for weighting and adjustment for mail flow underreports. These data may also reflect changes in the definitions of mail classifications.

①Includes pieces for which no response was given for household income.

②Fluctuations may be due to small sample sizes.

Note: 2005/2006 Estimates for Income Levels $25K-$29.9K are identical to those in $30K-$34.9K since categories used to collect data only included $25K-$34.9K.

Totals may not sum to 100 due to rounding.

Appendix B: Methodology

Study Design and Methodology

The U.S. Postal Service Household Diary Study (HDS), conducted by NuStats on behalf of the Demand Forecasting & Economic Analysis division of the Postal Service's Finance Department, is a continuously fielded study that measures household mail volumes, mail uses and attitudes about the mail and advertising.

The HDS uses a two-stage survey design: Stage 1 is an interviewer-mediated household recruitment interview. Stage 2 is a self-completion mail diary [Appendix C contains the survey instruments]. The HDS uses a multi-mode approach to minimize response bias, improve data accuracy through efficient data checking and householder re-contacts, and to provide immediate telephone assistance to participants during their diary week.

Household Recruitment Interview

The **household recruitment interview** collects information on household and personal demographics, recall of mail sent and received, adoption and use of communications technologies, bill payment behavior, and attitudes towards advertising.

Mail Diary

The **mail diary** covers a seven-day period (Monday to Sunday) and collects information on the number of mail pieces received and sent, industry source, mail characteristics, and attitudes regarding mail received.

Sample Design

This section describes the household selection process for participation in the HDS. A sample is the representative subset of the survey population used to gain information about the entire population. The population of inference for the HDS is all U.S. households. The probability design ensures each household has an equal chance of selection.

The sample design allows projections of results to all U.S. households. The Postal Service provided an address sample that NuStats matched for known telephone listings. Generally, the study was conducted using telephone sampling for household selection and screening, followed by diaries mailed to eligible households and completed by each household unit. Households without telephones were contacted via the U.S. Mail. The sample design involves a systematic sample stratified by strata (or urban/rural location) and Census regions, ensuring even coverage across the United States.

A master national sample was specified and drawn by in-house sampling statisticians. The Postal Service drew the household probability sample from the national address database following NuStats specifications. The master list, sorted by zip code, was used to draw a systematic stratified sample. This sample was then tagged with variables indicating each housing unit's geographic location in terms of Census region and stratum.

Sample was drawn for each of the four quarters based on known proportions of households within a Census region and urban or rural location. Census regions are defined by state. Urban and rural location is defined by county and metropolitan status as defined by the U.S. Census Bureau. The strata are defined by county as follows:

- **Stratum 1**: Counties that are part of the thirty largest metropolitan areas in the United States, defined by population, according to Census 2000 100 percent counts.
- **Stratum 2**: Counties that are part of metropolitan areas but are not in Stratum 1.
- **Stratum 3**: Counties that are not part of a metropolitan area.

Quarterly sample frames were then derived based on the amount of sample needed for each quarter, and sample was allocated to region and strata cells based on known proportions as indicated by Census 2000 counts of households.

The sample was continuously "fielded" throughout all 52 weeks of the year. Sample was released in a manner designed to recruit equal sample sizes for each diary week, resulting in a sample file of at least 5,200 households. Table B.1 below shows the distribution of recruited and completed households.

Table B.1:
Sample by Postal Quarter

Quarter	Required Sample	Recruited Households	Completed Households
Quarter 1	1,300	2,127	1,298
Quarter 2	1,300	2,131	1,407
Quarter 3	1,300	2,085	1,302
Quarter 4	1,300	2,240	1,443
Total	**5,200**	**8,583**	**5,450**

Data Collection Method

The study uses a two-stage design in which households are recruited to participate in the diary study in a household interview (Stage 1) and recruited households complete a seven-day diary of mail received and sent (Stage 2).

Stage 1: Household Recruitment Interview

The main function of the household recruitment interview is to recruit households to participate in the diary study. In addition, the interview collects information on household and person demographics, recall of mail sent and received, adoption and use of communication technologies, bill payment behavior and attitudes towards advertising.

Households completed the recruitment interview via computer-assisted telephone interviewing (CATI) technology. The FY 2006 household interview consisted of 8,583 completed interviews with an adult member (age 18 or older) in the household. These respondents represented a cross-section of U.S. households by geography. The household interview contained 125 data items and took an average of 22 minutes to administer. The flow of the interview included the following elements:

- **Introduction.** Each interview began with an introduction and purpose of the interview. The interviewer also verified the respondent's address.
- **Technology adoption and use.** Questions were asked about ownership and use of personal computers, fax machines, Internet, and other electronic communication. One battery of questions came from the Technology Augment survey, which was discontinued following the FY 2005 study.
- **Mail volume recall.** The respondent was asked to summarize how many personal letters, greeting cards, electronic greeting cards, and packages all members of the household have sent in a particular time period.
- **Use of postal services.** The use of post offices, post office boxes, and private mailing services was explored.
- **Communication with non-US friends and relatives.** If members of the households had any friends or relatives living overseas, they were asked about cards, letters, e-mails, telephone calls, and wire transfers sent.
- **Bill payments.** Bill payment volumes, methods, and timing were explored in depth.
- **Periodicals.** Summary volumes of magazines and newspapers received by the household were collected.
- **Advertising.** Descriptions of advertising received by the household as well as attitudes about the advertising, and orders placed because of it, were elicited.
- **Online shopping.** Respondents were asked about their online shopping habits, including questions about shipping methods.
- **Financial accounts and credit cards.** Respondents were asked to summarize the total accounts and credit cards held by the household.
- **Household and person demographics.** Demographic items included gender, age, marital status, employment status, educational attainment, race/ethnicity, household income, household wage earners, home ownership, residence tenure, and dwelling type.

The completion rate for the FY 2006 study (defined as the proportion of respondents who completed the diary portion relative to all recruited respondents) was 63.5 percent. This represents a slightly increase from 63.1 percent in 2005. Most recruitment refusals took place prior to hearing who NuStats was and why the firm was calling. Refusal households that were later re-contacted cited time constraints and privacy concerns as reasons for not participating.

Stage 2: Mail Diary Package

Recruited households were sent mail diaries, instructions, and a toll-free "help" telephone number. The night before an assigned diary week began, NuStats made reminder calls to households to confirm receipt of the packet and answer any questions. If the packet was not received by this time, NuStats re-confirmed the address, assigned a new diary week, and re-sent the packet.

The diary package contained a Certificate of Appreciation, Instruction Booklet, and a photo-based "Quick Start" sheet. The Instruction Booklet provided information about the study, answers to frequently asked questions, instructions for filling out the diary, guidelines for sorting mail, and examples of mail markings.

The diary instrument was composed of two parts:

- **The Question sheets contained in the Instruction Booklet**. The Question sheets were color-coded by mail classification (e.g. First-Class Mail received, First-Class Mail sent, Standard, Bulk Rate, Nonprofit, etc.). Information collected about each mail classification included: type of mail piece (i.e. envelope, postcard, catalog), receiver zip code, sender zip code, mail classification, mail type, sender type, information about advertising enclosed and receiver reaction or responses to it, and timeliness of the mail piece arrival.
- **Seven answer booklets, each specific to a day of the week**. Each booklet was arranged by mail classification and color-coded to correspond to the question sheets.

Households were instructed to enclose pertinent information from each mail piece received to enable NuStats editors to verify or clarify quantity and classes of mail recorded in the diaries. A three-stage editing process was used to check the accuracy of the diary information recorded by each household. First, returned diary packets were culled for those that represented a reasonable attempt to complete the diary. Second, the diary information recorded for each day was checked to assure sufficient and logical answers as well as to verify recorded information against the mail markings returned in the package. In stage three a second editor re-checked the diary information recorded for each day. This second edit was a quality control check that assured data accuracy. Completed diaries were given a rating of 1 (little follow-up needed), 2 (follow-up call needed), or 3 (unusable).

During the editing process, correction callbacks were made to households to clarify information or to fill-in missing information. About three percent of returned diaries did not pass the edit checking process, while over half required some form of respondent re-contact to clarify or correct diary information.

Of the 8,583 households recruited to receive a diary package, 5,450 actually returned acceptable completed diaries (defined as containing data suitable for analysis) to NuStats for a completion rate of 63.5 percent.

Data Processing

Data Management

Data management entails processing the information resulting from the Household Interview and Mail Diaries, making it available for analysis, storing it and documenting it. Household interviews were conducted using CATI technology, where the questionnaire and relevant data checks were programmed into a master questionnaire that was used by all interviewers to administer the survey. Recorded data was extracted from the CATI software into a database management file.

Returned diary information was recorded (entered) in one of two methods, either traditional manual data entry or through optical scanning technology. A data entry program, pre-programmed with data check routines, captured approximately 50 percent of the diary data in a database management file. The remaining 50 percent were scanned using Teleform software. Once scanned, the data were translated into a database file that was easily appended to include the manually entered data.

After completion of data collection, editing and entry tasks, the survey data were contained in eleven data files. One data file contained the Household Interview data. The Mail Diary data were in ten files – one for each mail classification (First-Class Mail received, First-Class Mail sent, etc.). These files were all developed in SAS-PC.

The file variables are identified by variable name. For each file variable, the File Information contains:

- Label, which is a brief description of the variable;
- Measurement level, which specifies the level of measurement as scale (numeric data on an interval or ratio scale), ordinal, or nominal. Nominal and ordinal data can be either string (alphanumeric) or numeric;
- Value formats, which identify the response codes; and
- Column width and alignment.

Several SAS programming operations were necessary to put the Mail Diary data in the desired form for analysis. The structure for these programs was contained in a separate File Information document that accompanied the data delivery.

Various edit routines were used to check the consistency of the reported data and to identify reporting or entry errors. Routine edit checks were conducted to examine questionnaire responses for reasonableness and consistency across items. Routine checks included such items as:

- Response code range checks;
- Checks for proper data skips and patterns of answering questions consistent with prior answers;
- Checks for realistic responses (e.g., number of online purchases possible in one month); and
- Checks for high frequency of item non-response (missing data from question refusals).

When conducting these checks, data were compared against the actual survey forms or respondents were re-contacted. NuStats identified extreme values that were impossible or unlikely, and corrected inconsistent data when possible. For example, extremely high numbers of computers owned by a household were examined to determine whether they were legitimate or probable entry errors.

Some extreme/inconsistent data values unable to be corrected or verified were edited to missing values.

In addition, NuStats performed in-depth customized data checks to ensure data within each record of the Household Interview were logically consistent. For example, a respondent should report paying bills by Internet only if he/she also reports having Internet access. Customized checks were also used to ensure consistency between the Household Interview and Mail Diary data. For example, an addressee was identified as a child (under 18) in the diary only if the household also reported having a child in the Household Interview.

Raw variables, derived variables, and analytical programs were documented in a data documentation binder that accompanied the data delivery. Any information that could be directly or indirectly used to identify individual respondents, such as respondent names, addresses, or telephone numbers, were removed to protect respondent confidentiality and privacy. Such information is stored in a locked archival file.

Sample Demographic Profile (all counts unweighted), Government Fiscal Year 2006

Data Weighting and Expansion

This section explains the methodology used for creating sampling and expansion weights for the FY 2006 Household Diary Study.

The FY 2006 HDS uses both weighting and expansion factors to 1) adjust the sample data to match population parameters and 2) expand mail volumes exhibited in the diary sample to all U.S. households.

Weighting Procedures – FY 2006 Recruitment

Sampling weights were produced separately for the households that participated in the recruitment phase of the FY 2006 HDS, and those that completed and returned a diary. There were two main weighting variables: Geography and Education. FY 2006 recruitment geographic weights were derived from sample households' strata and region:

Strata: As mentioned previously, there are 3 strata. A household was classified within strata as residing in the top 30 metropolitan areas nationwide, any other metropolitan area, or a non-metropolitan area[1]. Table B.8 provides unweighted sample counts from FY 2006 recruitment data for strata:

Table B.8:
HDS 2006 Recruitment Data: Urban/Rural Location

Urban / Rural Location	Household	Percent	Cumulative Percent
30 Largest Metro Areas	4,345	50.6%	50.6
Other Metro Areas	2,469	28.8%	79.4
Non-Metro Counties	1,769	20.6%	100%
Total	**8,583**	**100%**	

[1] Metropolitan area is defined within the sample according to the official definition used by the U.S. Census Bureau, commonly referred to as Metropolitan Statistical Areas (MSAs). Metropolitan areas are defined as single- or multi-county areas. Non-metropolitan areas are counties that do not belong to a metropolitan area. Each sample county was assigned to a stratum according to its metropolitan status.

Regions: Households were classified by state. There are four mutually exclusive regions as defined by the U.S. Census Bureau (along with respective states):

Four Census Regions:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Arizona, Alaska, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Table B.9:
HDS 2006 Recruitment Data: Geographic Region

Geographic Region	Households	Percent	Cumulative Percent
Northeast	1,710	19.9%	19.9
Midwest	2,079	24.2%	44.1
South	3,000	35.0%	79.1
West	1,794	20.9%	100%
Total	**8,583**	**100%**	

Strata/Regions: Table B.10 indicates the distribution of households from the FY 2006 recruitment sample within strata and regions.

Population parameters for the intersection of the three strata and four regions were based on 2000 Census counts of households by county. As Table B.10 shows, each county was grouped according to its location within these 12 mutually exclusive and collectively exhaustive geographic categories.

To calculate the weight for each strata/region interval, the population percentage was divided by the sample percentage. Geography weights appear in the last column to the right in Table B.11.

Table B.10:
Distribution of Households within Strata and Region

Geographic Region	Stratum *(Urban/Rural Location)*			Total
	30 Largest Metro Areas	Other Metro Areas	Non-Metro Areas	
Northeast	1,175	322	213	**1,710**
Midwest	976	550	553	**2,079**
South	1,047	1,210	743	**3,000**
West	1,147	387	260	**1,794**
Total	**4,345**	**2,469**	**1769**	**8,583**

Table B.11:
HDS 2006 Recruitment Data: Construction of Geographic Weight

Stratum	Geographic Region	Households *(Population)*	Percent	Households *(Sample)*	Percent	Weight
30 Largest Metro Areas	Northeast	13,512,686	13	1,175	14%	.94
	Midwest	11,317,737	11	976	11%	.94
	South	12,488,134	12	1,047	12%	.97
	West	14,020,576	13	1,147	13%	.99
Other Metro Areas	Northeast	4,134,396	4	322	4%	1.04
	Midwest	6,617,353	6	550	6%	.98
	South	15,769,481	15	1,210	14%	1.06

Totals		**105,480,101**	**100%**	**8,583**	**100%**	**1.00**

Source: Household Population Estimates based on U.S. Census Bureau, 2000 Census.

Education: In addition to weighting for differences in geography between the sample and the population, an additional weight was created based on differences in the educational attainment of the head of household. For those households in which either more than one person was identified as the head of household or no individual was identified as the head of household, one was chosen based on the following sequence of criteria: 1) oldest male, 2) oldest female (if no male exists). For cases in which two candidates for the head of the household were of the same age, the respondent on the phone was chosen.

Known population parameters were based on weighted proportions derived from the U.S. Census Bureau's Current Population Survey annual demographic file for March 2006. In cases where the head of household refused to provide his/her education level, an educational level was imputed based on the average educational level of like cases. There were 55 such cases in 2006; mean levels of educational attainment were based on geography (strata and regions), as well as age and income level, if provided.

Table B.12:
HDS 2006 Recruitment Data: Construction of Educational Attainment Weight

Educational Attainment	Households *(Population)*	Percent	Households *(Sample)*	Percent	Weight
8th Grade or Less	5,959,653	5%	225	3%	1.99
Some high school	10,094,168	9%	432	5%	1.76
High school graduate	34,593,104	30%	2,533	30%	1.03
Some college	25,866,447	23%	1,550	18%	1.25
Technical school graduate	5,467,385	5%	348	4%	1.18
College graduate	20,645,581	18%	2,095	24%	.74
Post graduate work	11,552,888	10%	1,400	16%	.62
Totals	**114,179,227**	**100%**	**8,583**	**100%**	**1.00**

Weighting Procedures – FY 2006 Diary Data

As mentioned above, 8,583 households participated in the recruitment phase of the FY 2006 HDS and 5,450 households completed usable diaries. Balancing weights for the FY 2006 HDS diary data were developed in the same way as for the recruitment data. An additional age weight was derived based on the age of the head of household using the following categories: 18-21, 22-24, 25-34, 35-44, 45-54, 55-64, 65-69, and over 70 years old.

Other adjustments to weights used in the diary data included a quarterly adjustment, which accounted for variances in sampling across postal quarters. All component weights were multiplied together and normalized to ensure that the number of weighted cases equals the number of unweighted cases.

A final adjustment in the form of expansion factors was made to expand the sample to the level of total households in the United States at the time of data collection, which was 114.2 million. The number of households in the United States was divided into the number of households that participated in the diary portion of the survey. The resultant factor was applied to each household in the survey. The expansion factor was multiplied by the sampling weight and then multiplied by 52 (the number of calendar weeks in one year) to derive nationwide annual volume estimates from the sample data.

Expansion Factor

114,179,227 / 5,450 = 20,950.31

Component Weight:

$$\omega = \frac{Ps / Pt}{Ss / St},$$

Where Ps = population count in cohort and
Pt = total population count;
Ss = sample count in cohort and
St = total sample count.

Adjustment Factors

In order to account for variations in the reporting of household mail volumes, three types of adjustment factors were used:

1) Destination adjustment factors;

2) Household-to-Household adjustment factors; and

3) Household-to-Nonhousehold adjustment factors.

Destination adjustment factors were calculated from differences between weighted volumes derived from FY 2006 HDS sample data and mailing volumes calculated using the Postal Service's City Carrier Cost System (CCCS) and Rural Carrier Cost System (RCCS). These destination adjustment factors were applied to First-Class Letters & Flats, Standard Regular and Non-Profit Letters & Flats, Postal Service Packages, and Periodicals.

Household-to-household adjustment factors were applied based on the logic that mail originating and destinating in households form a "closed loop." In other words, mail sent by households to households should equal mail received by households from households. (This situation does not necessarily exist within the confines of a finite sample since households may receive mail from households outside the sampling frame.) Therefore, household mail sent is adjusted to equal household mail received. This factor (1.29) was applied to First-Class Letters & Flats.

Household-to-nonhousehold adjustment factors were applied to account for under-reporting of mail sent by households to nonhouseholds. The use of this adjustment factor is based on a comparison between the reported bills paid by households from the recruitment phase of the survey and amounts derived from actual diary data. This factor (1.12) was applied to First-Class Mail sent by households to non-households.

The following table indicates adjustment factors applied by postal classification:

Table B.13:
HDS 2006 Adjustment Factors Utilized by Postal Classification

Postal Classification	Destination Adjustment Factor	Household-to-Household	Household-to-Nonhousehold
First-Class Letters & Flats	.97	1.29	1.12
Standard Regular Letters & Flats	1.03	N/A	N/A
Standard Non-Profit Letters & Flats	1.03	N/A	N/A
Postal Service Packages	.94	N/A	N/A
Periodicals	.89	N/A	N/A

2 ..... Restart at the beginning => GO TO INT01

[INT02] The USPS is conducting a study to better understand the type and volume of mail that households like yours receive and send. With the information you and 5,000 other households provide, the U.S. Postal Service can make wise decisions about postage rates and staffing needs to ensure an efficient national mail system. The study is purely a research effort and any information you provide will be held strictly confidential. For this study, your household will use diaries to answer questions about the mail they receive and send for one week. We'll give you a gift for completing the diaries. Before I can get your diaries out to you, I need to get some information about your household.

POSTMASTER GENERAL, CEO

UNITED STATES POSTAL SERVICE

August 5, 2005

«SAMPN»
Postal Resident
«ADDRESS»
«CITY», «STATE» «ZIP»

Like most Americans, you depend on an uninterrupted flow of mail to and from your home. The U.S. Postal Service aims to provide exceptional delivery performance and now boasts a 94 percent on-time service record nationwide for First-Class Mail. To help ensure this superior level of service in the 21st century, the U.S. Postal Service is conducting its **Household Diary Study**.

You, together with a few other families in the «ZIP» ZIP Code, have been selected to answer questions about the mail received and sent by your household for one week. Your household will be provided with postal diaries in which to record this information for 7 days, along with instructions on how to complete the diaries. The information you provide will help us make important decisions about performance improvements and investments in new equipment; facilities, programs and technologies to better serve you.

In appreciation of your participation, you have a choice of two gifts:

- **Thirty dollars**
- **100 First-Class stamps**

We would like to talk to you about this important national study. A survey specialist from NuStats, our partner in this study, will be contacting you to explain the study and answer any questions. If you have any questions, please contact NuStats at **1-888-441-USPS (8777)** or email questions to ***usps@nustats.com***.

To learn more about this important survey, you can also visit our project web page at ***www.nustats.com/uspsstudy.htm*** or telephone the postmaster at your local post office. Thank you for joining us in the **Household Diary Study**!

Sincerely,

John E. Potter
Postmaster General, CEO

WASHINGTON DC 20260-0010

Appendix C2: Diary Package

Certificate of Appreciation

«SAMPN»

USPS Certificate of Appreciation

Dear «LASTNAME» Family:

Thank you for participating in the ***Household Diary Study***. This information will be used to achieve our main goal, which is to improve local mail service. The information will also help us design systems to use our resources most effectively, develop strategies for making wise program advances, and monitor the effects of electronic technology on regular mail service. Ultimately, these data will be used to analyze ways of keeping the cost of service at a minimum.

The study is conducted on our behalf by NuStats, a professional research company in Austin, Texas. NuStats ensures that all information collected is strictly confidential and will be used for our research purposes only. The information from your household will be used only in combination with data from other participating households.

What are we asking of you?

Record ***all mail and packages*** your household ***sends*** and ***receives*** during a seven-day period.

Here's how:

1. ***Read the Instruction Booklet first*** – this step is ***important*** because it explains how to correctly fill out the Answer Booklets and provides visual examples.
2. ***Review the Photo Quick Start and Frequently Asked Questions.***
3. ***Record all mail and packages your household receives and sends each day in the Answer Booklets*** – place each completed Answer Booklet and Mail Pieces in the corresponding Daily envelope (keep them all and mail back in the pre-paid Priority Mail envelope at the end of your recording week).
4. ***Select your choice of gift on the Gift Selection Form.***
5. ***Return all completed Answer Booklets, Mail Pieces, and the Gift Selection Form in the pre-paid Priority Mail envelope*** – drop in any public U.S. Postal Service mail box or your local post office.

If you have any questions, do not hesitate to call NuStats at **1-888-441-USPS (8777)** between 11 am and 9 pm, Monday - Friday, or 12 and 5 pm, Saturday or Sunday, Central Standard Time.

I would like to thank you again for your participation and willingness to do the research that will help us improve our performance at your local post office.

Sincerely,

John E. Potter

Appendix C2: Diary Package

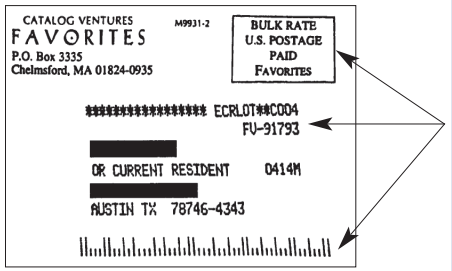

Photo Quick Start

PHOTO QUICK START

1 Sort your mail into the 7 types of mail listed on page 1 of the **Instruction Booklet.**

Mail Markings

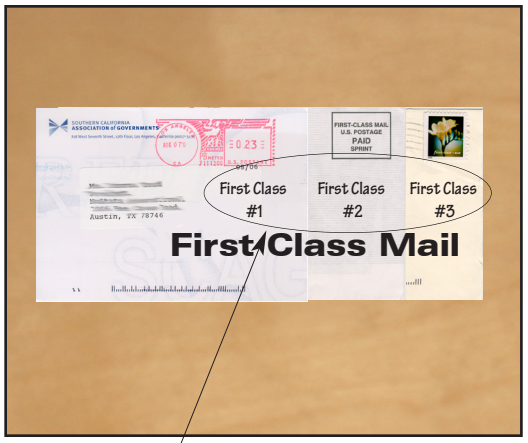

Mail Markings can be:

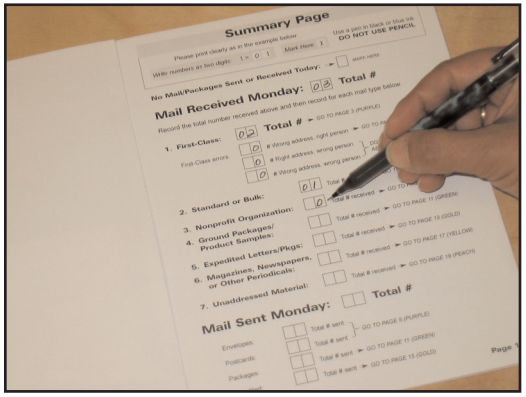

- in the top, right-hand corner,
- above or below the address, or
- inside the window of an envelope.

Use the mail markings to help you sort your mail.

Don't forget to include any packages your household received or sent!

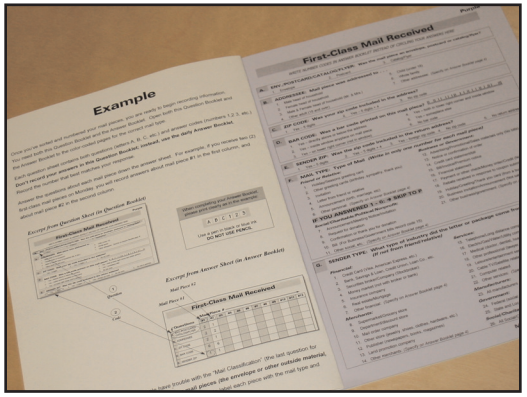

2 Label and number each mail piece within the 7 types of mail.

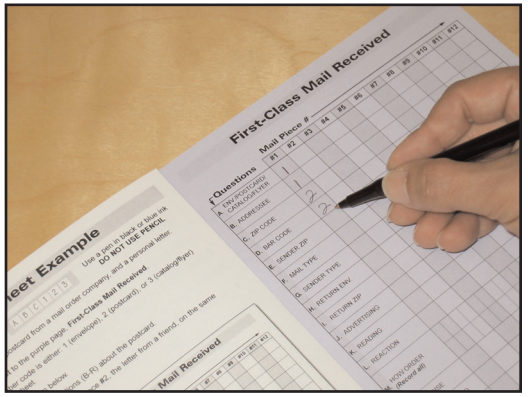

3 Open the **Answer Booklet** for Monday (or first mail day) to page 1 - Summary Page.

Record the total number of mail pieces you received that day for each mail type.

4 Open the **Question Booklet** to page 1 - First-Class Mail Received.

If you didn't receive any First-Class Mail that day, skip to page 3, First-Class Mail Sent, or page 5, Standard or Bulk Mail or other pages for mail types you did receive.

5 Record answers to questions about each mail piece in the **Answer Booklet.**

Be sure to record mail for each mail type you receive (Monday - Sunday) on the color-coded pages for that mail type.

Questions? *Visit the project web page: www.nustats.com/uspsstudy.htm,*
Call our USPS Hotline at: 1-888-441-USPS (8777), or e-mail your question to USPS@nustats.com

USPS@nustats.com

OR

visit the project web page at:

www.nustats.com/uspsstudy.htm

FY 2006

How to Fill Out the Answer Booklets

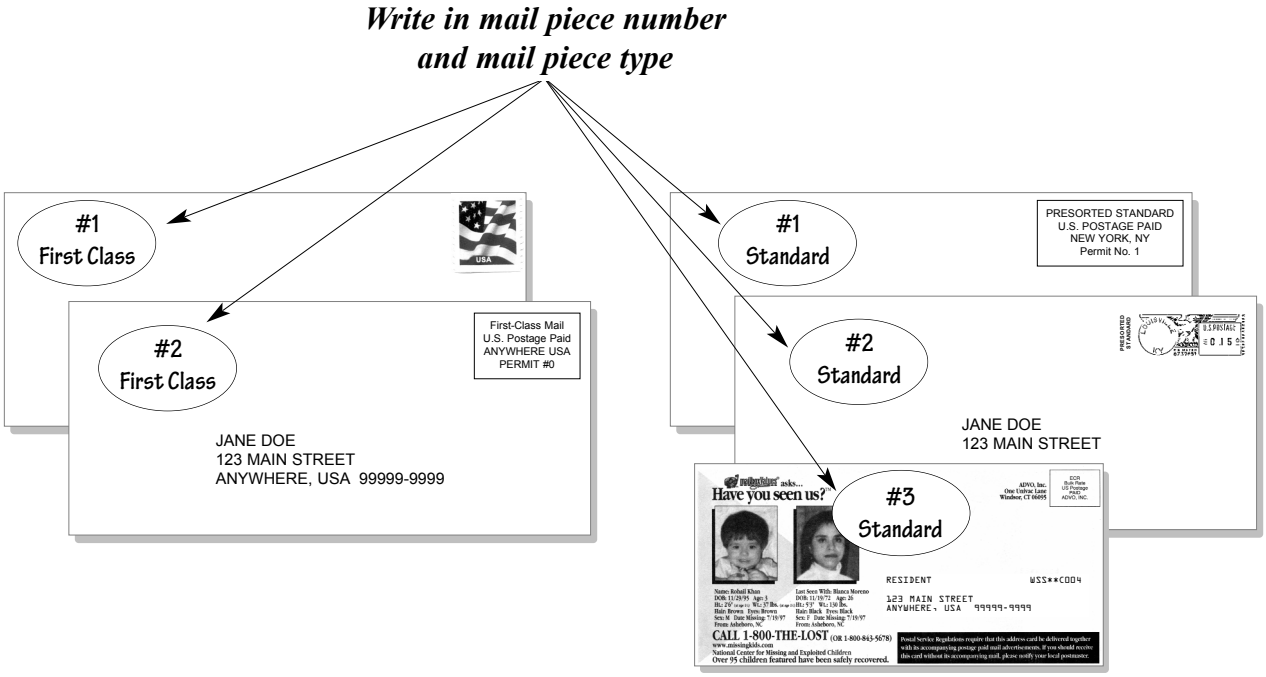

1 Sort your daily mail into the following types:

Explanations of each type and examples of mail markings are included in this book under the tab associated with each mail type.

1. First-Class Mail (Purple pages)
2. Standard or Bulk Mail (Blue pages)
3. Nonprofit Organization Mail (Gray pages)
4. Ground Packages or Product Samples (Green pages)
5. Expedited Letters & Packages (Gold pages)
6. Magazines, Newspapers, or Other Periodicals (Yellow pages)
7. Unaddressed Mail – Delivered by US Postal Service only (Peach pages)

2 Number the mail pieces within each type of mail.

First write the mail type on each piece of mail and then number the mail pieces.
The top First-Class mail piece is #1, the next is #2, and so on until you have numbered all First-Class mail for that day. Next number the other types of mail (Standard or Bulk, Nonprofit, Packages, etc.) beginning again with #1, and then #2, and so on for each different mail type.

3 Complete the Summary Page (page 1) in the Answer Booklet for each day.

On this page, record the total number of mail pieces of each type that all members of your household received and sent today.

Example Summary Page (in Answer Booklet)

Summary Page

Please print clearly as in the example below:

1 OR 20

Use a pen in black or blue ink
DO NOT USE PENCIL

No Mail/Packages Sent or Received Today: *(Mark here with an X)* ➔ ☐

Mail Received Monday: 11 **Total #**

Record the total number received above and then record for each mail type below.

1. **First-Class:** 4 **Total #** ➔ *GO TO PAGE 3 (PURPLE)*

   First-Class errors:
   - 0 # Wrong address, right person ➔ *GO TO PAGE 3 (PURPLE)*
   - 0 # Right address, wrong person
   - 0 # Wrong address, wrong person

   DO NOT ANSWER QUESTIONS ABOUT THESE

2. **Standard or Bulk:** 6 Total # received ➔ *GO TO PAGE 7 (BLUE)*
3. **Nonprofit Organization:** 0 Total # received ➔ *GO TO PAGE 9 (GRAY)*

- Packages: 0 Total # sent ➔ *GO TO PAGE 11 (GREEN)*
- Expedited: 0 Total # sent ➔ *GO TO PAGE 15 (GOLD)*

Monday 999642 **Page 1**

4 Read question sheets and record codes in the Answer Booklet.

Open the Answer Booklet (for your first mail day) and the Question Booklet to the pages for the same type of mail. There are color-coded sheets for each type of mail. You use a different Answer Booklet for each day of the week but you re-use the Question Booklet each day.

Each question sheet contains both questions and answer (number) codes. Instead of writing answers on the question sheet, you record the number code for the correct answer in your Answer Booklet. Each mail type (First-Class, Standard or Bulk, etc.) has its own color-coded answer sheet. You can record up to 12 mail pieces for each type. Remember that the postage on the mail piece will determine which colored answer sheet to use. Record information about mail piece #1 in the first column (under #1), for mail piece #2 in the second column (#2), etc.

1. Answer all the questions for your mail, one mail piece at a time, going down the answer sheet (vertical).
2. For each question (identified by A, B, etc.), write in the answer (number) code on the answer sheet.

When completing your Answer Booklet, please print clearly as in the example:

1 **OR** 20

Helpful Hint . . .

The most time-consuming task for most people is answering the "Mail Classification" question at the end of each question sheet (Question R for First-Class mail). To accurately answer this question, you need to record all of the mail markings that have been placed on the mail piece by the US Postal Service or a mailing house.

If you prefer, send us all of your mail pieces *(outside with the mail markings identified - not the contents)* and we'll classify them for you. Be sure to mark each piece with the mail type and mail piece number you have assigned and place in the correct daily envelope.

***Question R - Class** (First-Class Question sheet)*

R. CLASS: Mail Classification *(your mail pieces may show one or more markings - record all)*
To classify mail:
Look at markings in top right-hand corner, above or below address & inside window

1. Presorted First-Class, **or** PRSRT, **or** FP
2. AUTO
3. AB
4. AF
5. AT
6. AV
7. AUTOCR, **or** AC
8. Single Piece, **or** SNGLP, **or** SP
9. Certified
10. Registered
11. Return Receipt Requested
12. Certificate of Mailing
13. Restricted Delivery
14. Insured
15. Mail from outside the US
16. Mailgram
17. Federal Government Mail with Official Signature (FRANKED)
18. Other Federal Government Mail
19. First-Class Postage
20. COD
21. Can't classify type: *(Please mark & place in envelope along with other mail pieces for this day)*

5 Place completed Answer Booklets and mail pieces in the envelopes marked Monday through Sunday.

The completed answer booklets should be placed in the corresponding daily envelope. Please include the mail pieces with the mail type and mail piece number you have assigned, even if you completed the mail classification question at the end of each question sheet.

6 Place daily envelopes in pre-paid Priority Mail envelope.

The daily envelopes with your completed answer booklets and mail pieces should be sent to NuStats in the pre-paid Priority Mail envelope.

Special Circumstances

- If household members will be away from home on any day(s) during the diary week, record all mail received in the daily answer booklet on the day you return.
- If you forget to pick up your mail for a day, record all mail received under the next day.
- Sunday is included in your diary week. You may not receive mail on Sunday, but you may receive packages and/or send mail out.

Remember . . .

- Record all mail received and sent by all members of your household - but please DO NOT include any mail received or sent for a business, club, or association operated from your home.
- Only record mail sent to your home address, DO NOT include any mail sent to your P.O. Box.

First-Class Mail
Received and Sent
(Purple)

All First-Class mail may not say "First-Class" on the envelope or postcard. It is important to look at the mail markings and postage on each mail piece to determine if it is First-Class or not. Use the following to help you determine if your mail piece should be recorded under this type:

- Letter-size envelopes marked "**First-Class**" or "**Presorted First-Class**."
- Large envelopes marked "**First-Class**." Check the mail markings carefully, some large envelopes may be marked Standard or Bulk mail or Expedited.
- Most First-Class mail from businesses are marked "**First-Class**" or "**Presorted First-Class**" especially when they have a metered strip, not a stamp.
- If the mail piece just has a stamp without being marked "**First-Class**" or "**Presorted First-Class**," (or Standard or Bulk, or Non Profit, etc.) it is probably First-Class Mail.
- Most letter-size envelopes will have postage of 37¢ or more either in stamps or on a metered strip (this changed to 39¢ with the postage rate change on January 8, 2006).
  If it is "**Presorted First-Class**" it may have less postage but it will be marked as "Presorted First-Class."
- Postcards *usually* have 23¢ postage for First-Class (this changed to 24¢ with the postage rate change on January 8, 2006).
  Some postcards are larger in size than a typical picture postcard.
  No matter how large a postcard is, it should be classified as a postcard - not a flyer.
- The most common First-Class mail pieces are letters, bills, postcards, greeting cards, checks and money orders, etc.
- Mail ***(that is not a package)*** sent with special services, such as Certified, Registered, Insured, or Mailgram.
- Magazines, catalogs, newsletters or other periodicals that are marked "**First-Class**."

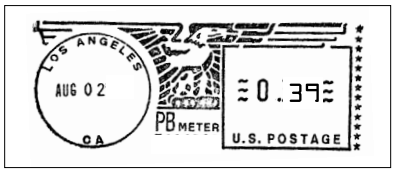

Examples of First-Class mail markings begin on the following page.

Standard or Bulk Mail
(Blue)

Use the following to help you determine if your mail piece should be recorded under this type:

- Mail ***(that is not a package)*** marked "**Presorted Standard**" or "**Bulk Rate**," whether it is a letter, postcard, magazine, catalog, circular, or flyer, etc.

- **Detached label card** with the following message and a marking for automated mail. These cards are usually accompanied by mail not in an envelope, such as advertising flyers, circulars, samples, coupons, or mail order offers. The detached label card should be recorded under "**Standard or Bulk Mail**" but the separate advertising pieces should be recorded under "**Unaddressed Mail**." (Peach pages)

Postal Service Regulations require that this address card be delivered together with its accompanying postage paid mail advertisements. If you should receive this card without its accompanying mail, please notify your local postmaster.

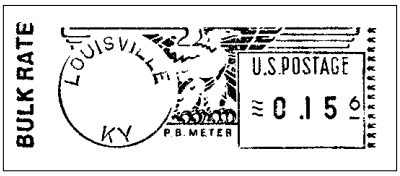

- For separate advertising pieces folded together, record each piece separately in the diary under "**Unaddressed Mail**." (Peach pages)

Special Note . . . Catalogs in envelopes marked "Bound Printed Matter" or items marked "Special Standard Mail or Media Mail," or "Library Mail" should be recorded under "Ground Packages/Product Samples Received" (Green pages).

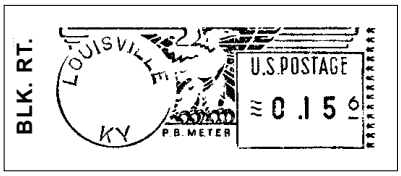

Examples of Standard or Bulk mail markings begin on the following page.

Nonprofit Organization Mail
(Gray)

Use the following to help you determine if your mail piece should be recorded under this type:

- All Nonprofit Mail must be marked "**Nonprofit Organization**," "**Nonprofit Org.**," **or** "**Nonprofit**."

- A few examples of Nonprofit Organizations are charities, schools, hospitals, churches, etc.

- May include requests for donations of money, your time, or other items, or they may be asking you to purchase an item or service.

- Packages should be recorded under "**Ground Packages or Product Samples**," or "**Expedited Letters & Packages**."

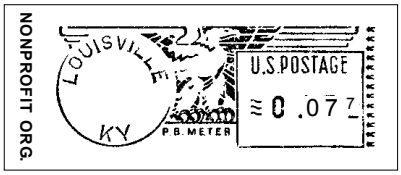

Examples of Nonprofit mail markings begin on the following page.

Ground Packages or Product Samples *Received & Sent* (Green)

Use the following to help you determine if your mail piece should be recorded under this type:

- Include all packages or boxes - large or small that were **not** sent Expedited (1 or 2 day service). Packages that were sent Expedited should be recorded under "**Expedited Letters & Packages**" (Gold pages).

- All packages received or sent via the United States Postal Service (USPS) as well as packages delivered by any other organization, such as the United Parcel Service (UPS), Federal Express, Airborne Express, etc. that were **not** sent Expedited (1 or 2 day service).

- Be careful to distinguish between packages delivered by the United States Postal Service (USPS) and those delivered by the United Parcel Service (UPS). The United States Postal Service (USPS) markings include an Eagle while the United Parcel Service (UPS) markings have a shield.

- **Priority Mail** packages should be recorded under "**Expedited Letters & Packages**" (Gold pages).

- Product samples delivered by any organization except those included in the newspaper.

Expedited
Letters & Packages
Received & Sent
(Gold)

Use the following to help you determine if your mail piece should be recorded under this type:

- Letters, packages, boxes and Express Paks that have been sent next day air, next day service, 2-day service, or Priority Mail.

- Delivered via the United States Postal Service (USPS), United Parcel Service (UPS), Federal Express, Airborne Express or any other Expedited mail carrier.

Examples of Expedited Mail carriers are included on the following page.

Expedited Mail Examples

Express Mail

Priority Mail

Airborne

FedEx

UPS

DHL Worldwide Express

Hint: Find closest match

Magazines, Newspapers, or Other Periodicals (Yellow)

Use the following to help you determine if the Magazine, Newspaper, or other Periodical should be recorded under this type:

- Delivered by the United States Postal Service (USPS) **only**.
- **Not marked** First-Class, or Standard or Bulk.
- Examples include daily, weekly and monthly magazines, alumni or fraternal magazines and newspapers.
- **Do not include** newspapers delivered by your local news carrier or magazines and newspapers that you bought at the store or a newsstand.
- **Do not include** catalogs. Catalogs are typically sent "**Standard or Bulk Mail**," or "**First-Class**."

Unaddressed Mail
(Peach)

Use the following to help you determine if your mail piece should be recorded under this type:

- Include materials delivered by the United States Postal Service (USPS) only.
  Do not include advertising material that has been left at your door, material hung on your doorknob, or on left on your car.

- Mail that doesn't have an address label (not even "Occupant" or "Resident").

- Mail not in an envelope, such as advertising flyers, circulars, samples, coupons, or mail order offers.

- For separate advertising pieces folded together, record each piece separately in the diary.

e-mail your question to:

USPS@nustats.com

OR

visit the project web page at:

www.nustats.com/uspsstudy.htm

FY 2006

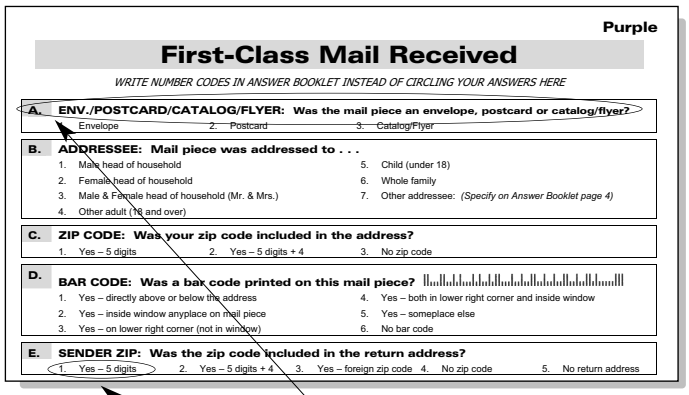

Example

Once you've sorted and numbered your mail pieces, you are ready to begin recording information. Remember to use the postage on the mail piece to help you determine the mail type ***(see page 1 of the Instruction Booklet for how to sort and number your mail)***. You need both this Question Booklet and the Answer Booklet. Open both this Question Booklet and the Answer Booklet to the color-coded pages for the correct mail type.

Each question sheet contains both questions (letters A, B, C, etc.) and answer codes (numbers 1,2 3, etc.) **Don't record your answers in this Question Booklet; instead, use the daily Answer Booklet.** Record the number that best matches your response.

Answer the questions about each mail piece down the answer sheet. For example, if you receive two (2) First-class mail pieces on Monday, you will record answers about mail piece #1 in the first column, and about mail piece #2 in the second column.

Answer Sheet Example

Please print clearly as in the example: 1 **OR** 20

Use a pen in black or blue ink
DO NOT USE PENCIL

Today you received a First-Class postcard from a mail order company, and a personal letter.

1. Open the **Question Booklet** to the purple page, **First-Class Mail Received**.
2. For question A, your number code is either: 1 (envelope), 2 (postcard), or 3 (catalog/flyer) as shown on the question sheet.
3. Write a "2" for postcard as shown below.
4. Finish answering the remaining questions (B-R) about the postcard.
5. Answer the same questions about mail piece #2, the letter from a friend, on the same page in the column under #2.

Personal Letter

Postcard

See Question Sheet for entire question

See Question Sheet for the list of codes for each question

For questions that allow more than one response, each column allows for up to four codes.

Appendix C2: Diary Package

"Frequently Asked Questions"

Frequently Asked Questions

Q. What are Mail Markings?

They are markings on the mail piece that identify its postage type and other mailing characteristics, such as zip code and bar code.

Please Send us your Mail Pieces!

Why do I need to send the entire mail piece?

When we receive your packet, it goes through an editing process which verifies that your mail pieces have been recorded under the correct mail type (First-Class, Standard or Bulk, etc.) and that all the questions have been answered. The entire mail piece provides us with additional survey information, such as sender type. So it is important to:

- **Label each mail piece with the number and mail type you assigned it in the Answer Booklet** so we are able to match it to your responses.
  (See page 1 in the Instruction Booklet for how to sort and number your mail pieces.)
- **Send us the entire mail piece**, such as the envelope your mail came in (without the contents unless it's something you don't need). DO NOT CUT OUT THE INDIVIDUAL MAIL MARKINGS. If the mail piece is a catalog, just send us the page with the mailing label and the postage.
  All information collected is strictly confidential and is used for research purposes only.

Q. What is the difference between First-Class and Standard or Bulk?

Standard or Bulk Mail pieces are marked "Presorted Standard," "PRSRT STD," "Bulk Rate," or "BLK RT" in the upper-right corner of the mail piece (close to the stamp or meter strip).
(See pages 10-14 in the Instruction Booklet for descriptions & visual examples of Standard/Bulk mail.)

Most First-Class Mail from businesses are marked "First-Class" or "Presorted First-Class" especially when they don't have stamps. If the mail piece just has a stamp without any of these marks, it is probably First-Class Mail. Most letter-size envelopes will have postage of 37¢ or more, either in stamps or a metered strip (this changed to 39¢ with the postage rate change on January 8, 2006). If it is "Presorted First-Class" it may have less postage but it will be marked. *(See pages 5-9 in the Instruction Booklet for descriptions & visual examples of First-Class mail.)*

Q. What is the difference between Ground Packages and Expedited Letters & Packages?

Expedited includes letters, packages, boxes and express paks that were sent Next day air, Next day service, 2-day service, or Priority Mail. These can be delivered by USPS, UPS, Fed Ex, Airborne Express or any other Expedited mail carrier.
(See page 21 in the Instruction Booklet for visual examples of carriers that deliver Expedited packages.)

Ground Packages include all packages or boxes that were **not** sent Expedited (1 or 2 day service).

Q. Are catalogs from mail order companies classified under Magazines, Newspapers, or Other Periodicals?

Most catalogs are sent either Standard or Bulk or First-Class, but the type of postage determines the mail type, so check the mail markings to determine the correct mail type.
